REPORT

TO

The Right Honourable GEORGE SCLATER-BOOTH, M.P.,
President of the Local Government Board, &c. &c.

*General Register Office, Somerset House,
31st March 1879.*

(1877.)

SIR,

THE year 1873 presented a remarkably high marriage-rate which since that year has declined to a low point ; and in that has followed the depression of trade according to the law which shows that the prospects of getting a livelihood largely regulate marriages in this country. The numbers that married in the year 1877 otherwise than by the rites of the Established Church were large ; they amounted to 51,956 or to 27 per cent. The greatest increase has been observed since 1851 when the proportion was only 15 per cent. The proportion of Roman Catholic marriages has since that date remained stationary. The increase has been chiefly among other religious denominations and in the marriages in the Superintendent Registrars' offices. Since the years 1856-60 the proportions of marriages by license have diminished in the Established Church, while those by banns have increased. In the year under review 83 divorced persons were re-married. The tendency to early marriage which has been observed to increase since 1841-5 attained its maximum in 1874, when 23 in 100 females, and 8 in 100 males were under age at the date of marriage. The proportion of men and women who write their names in the marriage register has, I am happy to report, gone on increasing ; and in the year 1877 only 15 men and 21 women in 100, signed the register with marks. The men in Scotland are fewer by 6, women by 3 ; so that comparatively the women are better educated in England than in Scotland. Ireland in the education of both men and women lags sadly behind the other divisions of the United Kingdom. I have to notice still an excess of male births over the births of females ; but the disproportion is diminishing ; in the ten years 1838-47 there were 105·0 males to 100 females registered, in the ten years 1868-77 the proportion had declined to 103·9 males to 100 females. The birth-rate was 36·2 per 1000 ; which is above the rate of the last ten years. The proportion of illegitimate children has fallen from 6·4 per cent. in 1855-64 to 4·7 per cent. in the three years 1875-77. The cause of this happy decrease is not obvious on the face of the returns ; but I have shown the comparative proportions in every county. The mortality was remarkably low in the year 1877 ; it was at the rate of 20·4 per 1000. In the country districts the mean mortality was 18·2, in the town districts 22·0. The death-rates in 1847 and 1877 were 29·0 and 22·0 in the town districts ; 21·3 and 18·2 in the country districts. Thus the mortality

declined by 7·0 in the town districts, and by 3·1 in the country districts. The death-rate of males in the whole of the country exceeded the death-rate of females ; the rates were respectively 21·8 and 19·0. The greatest differences occurred at the ages under 5 and above 65. The mean annual rates of mortality were in the four quarters of the year 22·3, 21·4, 17·7, and 20·2.

There has been a considerable increase in the number of hospitals since 1872 when the number was 450 ; in 1875 they were 582, and in 1877 the number of hospitals had increased to 644. The number of deaths in each of the three years was 11,638, 12,548, and 12,570 ; thus there has been no increase of death at all corresponding to the increase of hospitals.

There has been a great decrease in the mortality of the army abroad ; the mortality of non-commissioned officers and men was 17·8 in the 16 years 1861-76, against 10·6 in the year 1877. The mortality of officers in the corresponding years was 13·9 and 12·5. The mortality of non-commissioned officers and men at home was 11·0 in the 16 years against 8·3 in 1877. The officers are older than the men and their mortality is higher in 1877 than the mortality of men. The mortality of the navy was 7·1 ; 6·2 on the Home station, 14·8 in China, and 13·2 in the East Indies.

The deaths by drowning in the Royal Navy were less than one in 1000 in the year 1877. The Merchant Service lost eight times as many in proportion by wreck as Her Majesty's Navy. The mortality by wreck was 7·4, by accident 5·5 ; making 12·9 in the aggregate. This is slightly below the average 13·4. Some of the deaths on board colonial and fishing vessels are included, whereas the strength on which the mortality is calculated relates only to the registered vessels of the United Kingdom. It is to be regretted that the improvement is so slight after all the agitation that has taken place on the subject.

I have brought together the three divisions of the United Kingdom. The marriage-rate in Scotland was only 14·5, in Ireland was only 9·3 ; the marriage returns of both countries are evidently defective. The birth-rate in Scotland was 35·6, in Ireland 26·2 ; this is partly due to the diminished proportion of women in Ireland between the ages 15 and 55 ; but it is partly due to defective registration. The mortality in Ireland is set down at 17·5. The mortality is low in Ireland, but the difference is probably partly due to defective registration.

Probates and administrations were granted in England and Wales in 44,661 cases in the year ; the value of the effects were sworn under 125,547,904*l*. The average value in each case was 2811*l*. against 2779*l*. in the previous year. The proportion of persons of 21 and upwards who left wills, or left estates on which letters of administration were taken out, was 17·0 per cent.

I have shown the number of births to a marriage in ten of the chief states of Europe, from which it appears that the fecundity is 4·92 children to a marriage in Prussia, and 3·42 in France. England occupies an intermediate position, 4·63, but is much nearer Prussia than France.

The meteorology of the year was remarkable by its high winter temperature and its low summer temperature ; the winter was exceptionally mild, whereas the summer temperature was below the average. The rainfall was above the average.

I proceed now to discuss the facts in detail, of which I have given the above summary.

Emigration from and Immigration into the United Kingdom. — Mr. Giffen reports a further decline in 1877 in the annual number of emigrants from the United Kingdom.

In the annexed table it will be observed that the total emigration in 1877 was 119,971 against 138,222 in the previous year, showing a decrease of 18,251.

TABLE I.—EMIGRANTS OF VARIOUS NATIONALITIES, 1863–1877.

YEARS.	Of British Origin.				Foreigners.	Not distinguished.	GENERAL TOTAL.
	English.	Scotch.	Irish.	TOTAL.			
1863	61,243	15,230	116,391	192,864	7,833	23,061	223,758
1864	56,618	15,035	115,428	187,081	16,942	4,877	208,900
1865	61,345	12,870	100,676	174,891	28,619	6,291	209,801
1866	58,856	12,307	98,890	170,053	26,691	8,138	204,882
1867	55,494	12,866	88,622	156,982	31,193	7,778	195,953
1868	58,268	14,954	64,965	138,187	51,956	6,182	196,325
1869	90,416	22,559	73,325	186,300	65,752	5,975	258,027
1870	105,293	22,935	74,283	202,511	48,396	6,033	256,940
1871	102,452	19,232	71,067	192,751	53,246	6,438	252,435
1872	118,190	19,541	72,763	210,494	79,023	5,696	295,213
1873	123,343	21,310	83,692	228,345	72,198	10,069	310,612
1874	116,490	20,286	60,496	197,272	38,465	5,277	241,014
1875	84,540	14,686	41,449	140,675	31,347	1,787	173,809
1876	73,396	10,097	25,976	109,469	25,584	3,169	138,222
1877	63,711	8,653	22,831	95,195	21,289	3,487	119,971

The number of emigrants of *British origin*, after adding a certain proportion of 3,487 whose birthplaces were not distinguished was 97,967 against 112,045 in the previous year, showing a decrease of 14,078.

The total number of immigrants in 1877 was 81,848, showing a reduction of 11,709, or 12·5 per cent. compared with the number in the previous year. As regards immigrants of British origin only, the number was 64,060 in 1877, against 72,960 in the previous year, being a reduction of 8,900 or 12·2 per cent.

The excess of emigrants over immigrants of British origin in 1877 was, therefore, 33,907 against 39,085 in 1876.

These figures, it will be borne in mind, only refer to passengers to and from places out of Europe.

Of the 97,967 emigrants of British origin 65,785, or 67 per cent. were English, 8,900 or 9 per cent. were Scottish, and 23,282 or 24 per cent. were Irish, the proportions being the same as in the previous year.

In the number of emigrants of *Irish* origin there was a further decrease of 3,047, or 11·6 per cent. on the comparatively small number in the previous year.

The gradual decrease of emigrants of Irish origin is remarkable; the number who left the United Kingdom, according to these returns, during the fifteen years 1863–77 was 1,148,567; of these 544,869 or 47 per cent. emigrated during the five years 1863–67, 364,726 or 32 per cent. in the five years 1868–72, and 238,972 or 21 per cent. in the five years 1873–77. The number of emigrants of Irish origin in 1877 was 82 per cent. less than that in 1863.

In the emigration return of the Registrar-General of Ireland the number of natives who emigrated from *Ireland* in each of the six years 1872–7 is in excess of the number of emigrants of Irish origin from the *United Kingdom*, published by the Board of Trade. This is probably owing to a certain number crossing over to Great Britain; thus of the 38,503 Irish who left their native soil in 1877, less than one half (18,232) went abroad, for 11,573 came to England and Wales, and 8698 to Scotland. Of 37,587 Irish who emigrated from Ireland in the previous year (1876) 20,800 went to the Colonies or foreign countries, and 16,787 crossed over to Great Britain. No returns of the destination of emigrants from Ireland are published previously to 1876. Since 1871 the Irish have probably migrated in larger numbers from one part of the United Kingdom to another.

TABLE II.—IRISH EMIGRATION.

YEARS.	NUMBER OF EMIGRANTS OF IRISH ORIGIN.		Excess or Defect of numbers in Col. 1. over or under the numbers in Col. 2.
	From the <i>United Kingdom</i> , according to the Returns of the Board of Trade.	From <i>Ireland only</i> , according to the Return of the Registrar General of Ireland.

Total in the 15 Years } 1863-1877 - - }	1,148,567	1,155,654	- 7087

The number of emigrants to Australasia in 1877 was nearly the same as in the previous year, while the numbers to the United States and to British North America in 1877 were still less than the already greatly diminished numbers in the previous year. The emigrants to the several destinations, however, bore nearly the same proportions to the total as in 1876. See Table III.

TABLE III.—SHOWING the AVERAGE ANNUAL NUMBER of EMIGRANTS of BRITISH ORIGIN to each of the under-mentioned PLACES.

PERIOD.	TO UNITED STATES.		TO BRITISH NORTH AMERICA.		TO AUSTRALASIA.		TO ALL OTHER PLACES.		TOTAL.
	Average Annual Number.	Per-cent- age of Total.	Average Annual Number.	Per-cent- age of Total.	Average Annual Number.	Per-cent- age of Total.	Average Annual Number.	Per-cent- age of Total.	
Three years 1853-55	143,606	62	27,856	12	59,876	26	395	—	231,733
Five years 1856-60	74,956	61	7,968	6	37,136	30	3,437	3	123,497

„ 1877 - -	45,481	48	7,720	8	30,138	32	11,856	12	95,195

Note.—No correction has been made in the above table for those whose nationality was not distinguished.

The subjoined table shows the number of emigrants and immigrants of British origin. In 1877 the number of emigrants to the United States (45,481) was nearly the same as the number of immigrants therefrom (44,878), the excess of emigrants over immigrants being only 603. To British North America the numbers were—emigrants 7,720, immigrants 5,687, and the excess of emigrants was 2,033. To Australasia the emigrants were 30,138, while the immigrants therefrom were only 4,637, showing an excess of 25,501 emigrants.

TABLE IV.—EXCESS of EMIGRANTS over IMMIGRANTS of BRITISH ORIGIN in 1876 and 1877.

DESTINATION OR COUNTRY OF DEPARTURE.	Emigrants of British Origin.		Immigrants of British Origin.		Excess or defect of Emigrants.	
	1876.	1877.	1876.	1877.	1876.	1877.
United States - - -	54,554	45,481	54,697	44,878	- 143	603
British North America -	9,335	7,720	6,629	5,687	2,706	2,033
Australasia - - -	32,196	30,138	2,579	4,637	29,617	25,501
All other places - -	13,384	11,856	7,499	8,688	5,885	3,168
TOTAL - - -	109,469	95,195	71,404	63,890	38,065	31,305

Note.—The numbers in this Table are uncorrected for those whose nationality was not distinguished.

The age, sex, and occupation of emigrants and immigrants, *according to their nationalities*, are published for the first time in 1877. Mr. Giffen directs attention to the large proportion of children emigrating to Australasia compared with the proportion to the United States, which appears to confirm the inference drawn from other features of the returns that emigration for permanent settlement to the United States and to British North America is suspended.¹

This inference is further confirmed by reference to the occupation returns, which show that while a comparatively large number of agricultural labourers and of female domestic servants emigrated in 1877 to Australasia, a much smaller proportional number of servants, and hardly any agricultural labourers, proceeded to the United States.

Increase of Population.—The natural increase of population in England and Wales in 1877, derived from the excess of births over deaths, was 387,684. The net loss of persons of British origin to the population of the United Kingdom by excess of emigration over immigration was 33,907, about 73 per cent. of which (24,752) probably represents the proportion belonging to England and Wales. This number deducted from the natural increase of population gives 362,932 as the net gain in 1877, which approximates to the increase of population (305,193) during the twelve months, estimated from the actual rate of increase during the thirty years 1841–71.

Meteorology.—There were low barometer readings at the commencement of the year. During the 181 days ending 30th June the readings were below their averages on 105 days, and above on 76 days; from 1st July to 31st December the readings were below their averages on 95 days, and above on 89 days. During the first 50 days of the year 1877 there was an average daily excess of temperature of 6°·1 and the winter of 1876–7 was exceptionally mild; after this there were alternations of temperature until the 23rd March and for 26 days previously to that date there was an average daily deficiency of temperature of 2½. From then to April

11th there was an average daily excess in the mean temperature of about 3° ; afterwards a cold period set in and lasted from 12th April till 2nd June. From 1st to the 6th of May the average deficiency of temperature was as great as $11\frac{1}{2}^{\circ}$. There was an average daily deficiency of mean temperature of 4° during the 52 days ending 2nd June; after this the weather was somewhat warmer. For the 43 days ending August 12th there was a deficiency in the mean temperature of $1\frac{1}{4}^{\circ}$, and the average deficiency for the 40 days ending September 30th was $3^{\circ}\cdot 1$; indeed Mr. Glaisher reports that the mean temperature during the month of September was lower than that of any September back to 1803. The temperature of the summer of 1877 was therefore below the average. There were severe gales on the 14th October and on the 11th November; on the latter date the lowest reading of the barometer for the year was recorded. During the remainder of the year the temperature was variable, and from the 13th to the 28th December the alternations were still more frequent. The average daily temperature of the 47 days ending with the latter date was $\frac{3}{4}^{\circ}$ in excess. The mean temperature of the year at Greenwich was $49^{\circ}\cdot 4$ or $0^{\circ}\cdot 9$ in excess of the average of 106 years.

The rain-fall in January was excessive, and at Greenwich it measured 4·35 inches; this, reports Mr. Glaisher, is most remarkable since the rain-fall in December of the previous year was excessive. The total fall in the first four months was 4·8 inches above the average. In June and September the quantity was remarkably small, while the fall in November was very large. Rain or snow fell in 185 out of the 365 days, and the total fall in the year was 26·9 inches, or 1·6 inches above the average of the previous 62 years. Snow fell on 71 days in the year.

The total horizontal movement of the air was greater than usual.

Prices.—The country, in 1877, had not recovered from the commercial depression which prevailed in the three years 1874–76. Four years of industrial distress have therefore now been experienced since the period (1871–73) when high wages raised the cost of production so extravagantly high.

For three successive years the harvest has been bad. In 1877 cold and rain in July and rain in August damaged the crops, especially in the north, and the average price of wheat rose from 46s. 2d. per quarter in 1876, to 56s. 9d. which, however, considering that it was a period of war in Europe, was comparatively low. But in order to provide food for 33 millions of people (who it is estimated consume between 22 and 23 millions of quarters of wheat annually) the wheat grown in the United Kingdom was supplemented by an import for home consumption* of 12,310,957 quarters of foreign and colonial wheat in 1877 against 10,069,050 quarters in 1876.

The area under wheat in the United Kingdom, including the Isle of Man and the Channel Islands, in 1876 was 3,124,000 acres, being 11 per cent. less than in 1875, and 22 per cent. less than in 1869.

Among the most noteworthy events at home which contributed to the depression in 1877 may be mentioned an unsatisfactory harvest, the prevalence of strikes in most of the great trades, distress in the iron and coal trades; agricultural interests also suffered greatly, the potato and fruit crops failed generally, and the year, like its predecessor, was altogether unfavourable for the farmer; indeed, had there not been a good foreign supply of corn and other imports to compensate for the deficiency of home produce, the distress would have been greatly aggravated.

Much depression was also experienced on the continent, and in the United States, the political conflict in France, the war between Russia and Turkey, and the famine in Southern India contributing more or less to the general state of depression.

* A certain quantity of home-grown wheat is exported from the United Kingdom every year, no notice of which is here taken.

The quantity of meat imported in 1876 was 788,973 cwts., showing an increase of 257,065 cwts. over that in 1875. In 1877, the quantity was still greater, viz., 1,277,686 cwts., being 488,713 cwts. in excess of that imported in 1876.

TABLE V.—QUANTITY of MEAT IMPORTED in the Seven Years, 1871-7, exclusive of PORK.

—	1871.	1872.	1873.	1874.	1875.	1876.	1877.
Beef, Salted or Fresh -	Cwts. 302,079	Cwts. 228,912	Cwts. 260,554	Cwts. 261,721	Cwts. 215,581	Cwts. 413,351	Cwts. 678,505
Meat, „ „ -	42,340	55,354	79,841	119,403	144,954	92,556	130,178
Total -	344,419	284,266	340,395	381,124	360,535	505,907	808,683
Meat, Preserved } otherwise than by salting - - - }	254,833	350,729	260,749	265,223	171,373	283,066	469,003
Total Meat -	599,252	634,995	601,144	646,347	531,908	788,973	1,277,686

This largely increased importation of meat has probably had the effect of reducing the recent high price of butchers' meat. The average price per pound of beef by the carcass at the Metropolitan meat market was $6\frac{5}{8}d.$ in 1876; in 1877 it was $6\frac{2}{8}d.$, or 5·7 per cent. less. The average price per pound of mutton was $7\frac{1}{8}d.$ in 1876; in 1877 it was $7d.$, showing a decrease of 6·7 per cent.

Potatoes were very dear in 1877, the mean price for the best quality at the waterside market in Southwark being 146s. 0d. per ton; only once in the last 26 years has this price been exceeded, viz., in 1873, when they were 159s. per ton.

In the importation of animals there is a marked decrease in 1877 compared with the previous year; in oxen and bulls of 20,339, in calves of 13,926, in sheep and lambs of 167,274, and in swine of 23,521. See sub-joined table.

TABLE VI.—NUMBERS and VALUE OF ANIMALS IMPORTED in 1875, 1876, and 1877.

ANIMALS.	NUMBERS.			VALUE.		
	1875.	1876.	1877.	1875.	1876.	1877.
Oxen and Bulls -	173,705	163,958	143,619	£ 3,737,588	£ 3,554,480	£ 3,243,125

Cows - - -	51,264	58,520	25,404	963,634	1,097,019	444,456
GRAND TOTAL -	1,321,278	1,356,463	1,098,287	7,329,585	7,260,115	6,012,778

NOTE.—The figures in this Table, excepting for Sheep and Lambs, are derived from the Monthly Return of "Trade and Navigation of the United Kingdom," compiled by the Board of Trade, as the "Statistical Abstract" does not distinguish the several kinds of cattle or give the number of Swine.

Pauperism.—The average number of paupers returned on the last day of each week in each of the years 1876 and 1877 was—in-door 137,930 and 146,843—out-door 531,344 and 519,493, showing an increase in the number of in-door paupers relieved, but a decrease in the number of out-door paupers relieved.

MARRIAGES.

From a commercial point of view 1877 was more unfavourable than the previous year, and this fact is represented by a further decrease in the marriage-rate; the number of marriages fell from 201,874 in 1876, to 194,352 in 1877, or the number of persons married to 1000 persons living fell from 16·7 to 15·8; so low a rate has not been observed since 1847, about the the time of the Irish famine.

The marriage-rate (persons married to 1000 persons living) is invariably lower in the agricultural counties than it is in the counties where the population is engaged in mining and manufacturing industries. The rate in 1877 in the chiefly agricultural counties ranged from 10·7 in Hereford, 11·2 in Herts, 11·3 in Cornwall, 11·9 in Cambridge and in Essex, to 13·7 in Dorset, 14·2 in Norfolk, 14·6 in Sussex, 14·6 in Hants, 14·6 in Lincoln, and 15·0 in Devon. The rates in 1877 in the counties where the population is principally engaged in mining and in skilled labour ranged from 15·0 in North Wales, 15·1 in Worcester, 15·4 in Cheshire, and 15·7 in Stafford, to 18·5 in Nottingham, and to 18·7 in the East Riding of York and in Lancaster; in London the rate was 19·0.

In Dorset and Nottingham the rate was slightly in excess of the average, while in Cumberland and North Wales it was considerably above the average, but in nearly all the other counties the rate was below the average of the preceding ten years. The counties of Cambridge, Durham, Northumberland, and Monmouth were conspicuous for a rate much below the average.

Some of the general causes which have contributed to the fluctuation in the number of marriages in England and Wales during the past thirty-nine years are shown in Table 85.

In the ten years in the table (1839-48) preceding the period when the Act relating to free trade came into operation the average price of wheat was high, 58s. 7d. per quarter, and there were great fluctuations in the marriage rate.

In the first five years of the decade the average price of wheat fell gradually from 70s. 8d. per quarter in 1839 to 50s. 1d. per quarter in 1843; but the hopes and prospects of the people were depressed, so the marriage-rate declined from 15·9 in 1839 to 15·2 in 1843. The most noteworthy events of the period were the chartist riots in 1839, and the turn-out of cotton spinners and great general distress in 1842, when the depression reached a crisis and expressed itself in the lowest marriage-rate (14·7) recorded since the commencement of civil registration. Previously to 1842 the country had suffered from four successive bad harvests.

In the second half of the decade (1844-48) the marriage-rate rose, but the potato disease in England and Ireland, and three deficient harvests in 1845, 1846, and 1848, together with a commercial panic, brought the rate down to 15·8 in 1847, the year when 10,000,000*l.* were voted for the relief of the Irish who were suffering from famine. During these ten years just reviewed (1839-48) the quantity of wheat imported into the United Kingdom, and retained for home consumption, never exceeded 12,000,000 cwts.

In the five years 1849-53 the mean marriage-rate was high; it increased from 16·2 in 1849 to 17·5 in 1852, and notwithstanding the very deficient harvest in 1853, the rate rose to 17·9 in that year. This is the highest marriage-rate on record. During this period (1849-53) the duty on corn was reduced to 1s. per quarter; gold was discovered in Australia, the great exhibition was opened, and owing to free trade the quantity of foreign wheat imported began to increase; in 1853 it reached 20,913,000 cwts.; the average price of wheat was low, and in 1851 reached a minimum price of 38s. 6d. per quarter.

The five years 1854-8 witnessed some events of great importance; in 1854 there was an extremely good harvest, but war was declared against Russia, and the year 1857 was memorable for the Indian mutiny and for a great commercial panic; all these events had a depressing effect on the prospects of the community, and the marriage-rate declined from 17.2 in 1854 to 16.5 in 1857 (and notwithstanding a good harvest) to 16.0 in 1858.

In the decade 1859-68 the annual marriage-rate was 16.8. In the first five years of this period, although provisions were cheap, the marriage-rate fell to 16.3 in 1861, and to 16.1 in 1862, when great distress prevailed in the cotton districts of Lancashire, owing to the temporary disruption of the United States; in both these years the harvest was deficient. For the first three years (1864-6) of the second lustre, the marriage-rate was high, and the price of wheat comparatively low, but the effects of the rinderpest which broke out in 1865 and was not stamped out as an epidemic until about the middle of 1867, and the great monetary panic in London in 1866, soon made their impression on the rate, and it fell from 17.5 in 1866 to 16.5 in 1867, and to 16.1 in 1868, the year of the Abyssinian war. The year 1866 was memorable as the commencement of a period of commercial depression which lasted until the end of 1870. From the year 1868, owing to the ravages of the cattle plague, both beef and mutton rose considerably in price. In each of the three years 1865-7 the harvest was deficient.

The next five years, 1869-73, comprised two (1869-70), when trade was dull and the marriage-rate was low. In 1869 the duty on corn ceased, but in this and the following four years the harvest was deficient. In the last three years (1871-3) of this lustre the country revived; the year 1871 witnessed a remarkable rise in prices and in the wages of labor and commerce and manufactures recovered from the languor of the previous five years; but a year or two afterwards a reaction set in, wages were greatly reduced, and these three years of prosperity were followed by four years (1874-77) of commercial difficulties and stagnation in trade. There was an abundant harvest in 1874, but in 1875-7 the harvests were unsatisfactory, trade was depressed, strikes were prevalent, and commercial failures were experienced. All this was expressed in the marriage-rate of the country, which rose from 15.9 in 1869 and 16.1 in 1870 to 16.7 in 1871, 17.5 in 1872, 17.6 in 1873, and fell to 17.1 in 1874, to 16.8 in 1875, to 16.7 in 1876, and to 15.8 in 1877. The marriages in the last ten years experienced nearly as great fluctuations as they did in the decade previously to the introduction of free trade.

The gradual increase in the supply of foreign wheat, a few years after the duty on corn was reduced, is remarkable. Thus the number of cwts. of wheat imported into the United Kingdom to every 100 of population in the five years 1854-8 was 54, whereas in the five years 1859-63 the proportional number was 94.

In the four years 1863-6 when the price of wheat was low, there was a considerable reduction in the quantity imported, but in 1867 when the price rose to 64s. 5d. per quarter, after two or three deficient harvests, a new impetus was given to the importation of corn, and the foreign supply still further increased; the average number of cwts. imported in the five years 1869-73, to every 100 of population, was 121, and in 1874-7 it was 144.

In 1877 the number of cwts. imported for home consumption was no less than 53,347,482 or 159 cwts. to every 100 of population, an enormous increase compared with the quantity in 1846 (8,592,458 cwts.) immediately before free trade was in operation.

Forms of Marriage.—194,352 marriages were celebrated during the year 1877; 142,396, or 73.3 per cent., according to the rites of the Establishment, and 51,956, or 26.7 per cent., otherwise.

Of the marriages according to the rites of the Established Church 18, or 101 per cent., were by special license, 16,365, or 111.55 per cent., by license, 121,820, or 85.96 per cent., after banns, and 3,511, or 2.48 per cent., by Superintendent Registrar's certificate.

In my last report I drew attention to the fact that in the English Church for some reason or other opinion has, since 1861, set in favor of marriage after the proclamation by banns of the names of bride and bridegroom in the face of the congregation. The subjoined table shows the proportion of marriages by license, banns, and Superintendent Registrar's certificate at different periods, after correction for imperfect returns. Thus, the number of marriages by license increased from 15 per cent. in 1841-5 to 16 per cent. in 1856-60, and then gradually fell off to 12 per cent. in 1876. The number of marriages after banns declined from 83 per cent. in 1841-5 to 81 per cent. in 1856-60, after which period the number gradually increased, until in 1877 the proportion per cent. reached 86.

TABLE VII.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-77.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS of MARRIAGES according to the RITES of the ESTABLISHED CHURCH.				
	Total.	Special License.	License.	Banns.	Superintendent Registrar's Certificate.
1841-45 - -	100	01	15.42	83.28	1.29
1846-50 - -	100	01	15.47	82.39	2.13
1851-55 - -	100	01	15.58	81.53	2.88

1861-65 - -	100	01	14.98	81.94	3.12
1866-70 - -	100	01	13.56	83.43	3.00
1871-75 - -	100	01	11.58	85.71	2.70
Year 1876 - -	100	02	11.89	85.59	2.50
„ 1877 - -	100	01	11.55	85.96	2.48

In 682 instances,* or .48 per cent., in 1877 the clergy omitted to state under which of the foregoing heads the marriages should be recorded: this is a comparatively large number, and only 16 fewer than the previous year, so that although the number of such imperfect returns has gradually decreased in previous years there was no improvement in 1877, as will be seen by the subjoined results, showing to every 1000 marriages according to the rites of the Established Church the number of cases in which the words “by license,” “by banns,” or “by Superintendent Registrar's certificate” were omitted in the years 1841-77:—

Years.		Mean Annual Number.	
In the five years	1841-45	-	159
„	1846-50	-	122
„	1851-55	-	41
„	1856-60	-	29
„	1861-65	-	25
„	1866-70	-	20
„	1871-75	-	7
Year	1876	-	5
„	1877	-	5

* These 682 cases have been proportionally distributed over the foregoing headings.

Although the proportional number of cases was nearly the same in each of the years 1876 and 1877 the results in the annexed table show that the proportions varied considerably in the different Registration Divisions in the two years.

TABLE VIII.—To every 1000 MARRIAGES according to the RITES of the ESTABLISHED CHURCH in each of the 11 REGISTRATION DIVISIONS the NUMBER of INSTANCES in which the CLERGY omitted to state whether the MARRIAGE was by LICENSE, by BANNS, or by SUPERINTENDENT REGISTRAR'S CERTIFICATE.

—	1876.	1877.
ENGLAND - - -	4·69	4·79
London - - -	1·15	0·73
South-Eastern Counties - -	8·14	11·16
South Midland Counties - -	9·71	10·17
Eastern Counties - - -	13·83	10·11
South Western Counties - -	10·98	11·38
West Midland Counties - -	5·38	6·08
North Midland Counties - -	4·22	4·48
North Western Counties - -	0·68	1·00
York - - -	3·38	3·00
Northern Counties - -	3·71	3·63
Wales - - -	7·59	5·70

Of the 51,956 marriages not according to the rites of the Establishment, 8,277, or 15·93 per cent., were solemnized in the registered places of Roman Catholics, and 21,905, or 42·16 per cent., in the registered places of other Christian denominations, and 21,269, or 40·94 per cent., took place in the offices of Superintendent Registrars without any religious rite. Seventy-eight, or ·15 per cent., were celebrated according to Quaker rites, and 427, or ·82 per cent., were marriages of Jews.

First Marriages ; Re-marriages.—The number of men who married in 1877 was 194,352 ; of these, 167,443 were bachelors, and 26,909 were widowers ; 158,798 of the bachelors married spinsters ; and 8645 bachelors married widows. Of the 26,909 widowers who re-married 16,238 wedded spinsters, and 10,671 wedded widows.

Of the same number of women who married, 175,036 were spinsters, and 19,316 were widows ; 158,798 of the spinsters were wedded to bachelors, and 16,238 to widowers. Of the widows, 10,671 were re-married to widowers, and 8645 to bachelors. The *number of persons* who re-married in 1877 was 46,225.

The number of marriages of divorced persons in 1877 was 82, or 8 fewer than in 1876. Of 38 divorced men who re-married, 26 married spinsters, and 11 married widows. Of 45 divorced women who re-married, 30 married bachelors, and 14 married widowers. There was one marriage in which both parties had been divorced.

Ages at Marriage.—It has still to be regretted that in a large proportion of cases the marriage registers are imperfect as to age : thus of the 194,352 couples who married in 1877 the precise ages of both parties were not stated in 41,957 instances, the age column of the marriage register in these cases being filled in by the officiating minister or by

the registrar of marriages with the words “of full age,” “minor,” or “under age;” such imperfect returns amounted to 21·6 per cent. of the total marriages, a reduction of only 1·2 from the per-centage of the previous year.

The gradual improvement which has taken place in England during the last 20 years is shown in the subjoined table :—

TABLE IX.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER in ENGLAND, 1858–77.

YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	YEARS.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.
1858	40·6	1868	33·0
1859	38·9	1869	31·2
1860	37·5	1870	30·1
1861	36·7	1871	29·0
1862	36·4	1872	27·7
1863	35·3	1873	27·0
1864	34·9	1874	25·8
1865	35·1	1875	23·7
1866	33·6	1876	22·8
1867	33·5	1877	21·6

The returns, as to age, continue to be very incomplete in London, the proportional number of cases in which the ages of both parties were not stated in 1877 being 40·4 per cent. In the South Midland, South-western, South-eastern, and Eastern counties the proportions were high. The returns were more complete in the mining and manufacturing counties than in and around London ; thus, in Yorkshire the ages of both parties were omitted to be stated in only 8·7 per cent. of the total marriages, in the Northern counties the proportional number was 9·9, in Monmouthshire and Wales 13·9, and in the North-western counties 15·2.

The annexed table shows the proportion of imperfect returns in each of the years 1876 and 1877 in each registration division of England and Wales :—

TABLE X.—PROPORTION PER CENT. in which the AGES of BOTH PARTIES were not RETURNED in the MARRIAGE REGISTER, in each REGISTRATION DIVISION in 1876 and 1877.

GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.		GROUPS OF COUNTIES.	To every 100 Marriages the number of cases in which the ages of both parties were not returned.	
	1876.	1877.		1876.	1877.
Yorkshire - - -	8·0	8·7	Eastern Counties - -	26·0	24·2
Northern Counties - -	11·2	9·9	South Eastern Counties -	27·7	24·8
Monmouthshire and Wales	14·5	13·9	South Western Counties -	26·8	25·3
North Western Counties -	15·7	15·2	South Midland Counties -	28·8	27·1
West Midland Counties -	20·1	17·9	London - - - -	43·9	40·4
North Midland Counties -	21·9	21·5			

If the clergy, especially of London, would endeavour to cause the precise ages to be returned at the time of registering a marriage it would not only enhance the statistical value of these national records, but it would also be in the interest of the parties themselves to return their precise ages, for tracing pedigree, and for other purposes of personal identification.

The mean age at marriage as determined from the 304,790 men and women whose ages were stated in the year 1877, including the re-married, was 27·9 years for men, and 25·8 for women. For 133,110 bachelors it was 25·7 years, and for 138,305 spinsters 24·4 years. The mean age at marriage of 19,285 widowers was 43·0 years, and of 14,090 widows 39·6 years. These mean ages are almost exactly the same as those of ten years ago.

Minors.—A comparison of the number of minors married with the *total marriages* indicates, though less accurately than a comparison of the number of minors married with the number of minors living, the increasing tendency to early marriage. The results in Table 8. of the preliminary tables show that the proportional numbers marrying under 21 years of age gradually increased from 1848 to 1874, after which they began to decline. Thus the proportion of minors to 100 marriages attained its maximum (15·54) in 1874, and probably owing to the depression of trade gradually declined until in 1877 it fell to 15·07. The proportion has increased at a greater rate among men than among women.

The annexed table shows the proportions in periods of five years from 1841.

TABLE XI.—PROPORTIONS per Cent. of MINORS who MARRIED, 1841-77.

PERIODS of Five Years.	To every 100 Marriages the annual proportion under 21 Years of Age.	
	Males.	Females.
1841-45	4·38	13·33
1846-50	4·48	14·23
1851-55	5·45	17·28
1856-60	5·94	18·65
1861-65	6·55	19·87
1866-70	7·08	20·84
1871-75	8·15	22·22
Year 1876	8·25	21·99
„ 1877	8·11	22·03

The counties which generally show the highest proportions of marriages of minors were enumerated in my 38th Annual Report.

15,758 males and 42,815 females married in 1877 under 21 years of age; therefore to every 100 males married 8·11 were under age, and to every 100 females married 22·03 were under age.

Signature in Marriage Registers.—A fresh impetus has been given to education during the last 25 years, and this will probably account for the decrease in the proportional numbers of men and women who sign the marriage register with marks. Of the 70,237 persons who signed with marks in 1877, 29,707 were men, and 40,530 were women, so the

men were better educated than the women, the proportion to every 100 marriages being 15·3 for men against 16·3 in the previous year, and for women 20·9 against 22·1 in the previous year. Thus the number of both sexes unable to affix their names to the marriage register is still comparatively large, being equal in 1877 to 18·1 per cent.

The results in the subjoined table show the improvement that has taken place during the last thirty-seven years.

TABLE XII.—PROPORTION per Cent. of MEN and WOMEN who SIGNED the MARRIAGE REGISTER with MARKS, 1841-77.

PERIODS of Five Years.	To every 100 Marriages the annual proportion who signed the Marriage Register with Marks.		Quinquennial Decrease in the proportions who signed with Marks.

In 15,263 instances in 1877 *both* the husband and the wife signed with marks, and in 39,711 cases either the husband or the wife was unable to write.

The subjoined table shows the state of elementary education, as indicated by the proportional number of men and women who signed the marriage register with marks, in the different divisions of the United Kingdom for the most recent years for which the abstracts have been published.

Buildings registered for the solemnization of Marriages.—The number of these buildings on the register on the 31st of December 1877 was 8,051 being an increase of 255 during the year, to which number the Presbyterians of all descriptions contributed 10, the Independents 35, the Baptists 44, the Roman Catholics 15, the Unitarians 3, the various sects of Wesleyan Methodists 111, the Calvinistic Methodists 21, the New Jerusalem Church one, and other religious denominations 16, whilst the Countess of Huntingdon's Connexion showed a decrease of one.

Certified Places of Meeting for Religious Worship.—The number of certified places of meeting for religious worship on the register on the 31st of December 1877 was 19,546, being an increase of 482 during the year. The following is a list of the descriptions of the congregations on whose behalf places have been certified. Those printed in italics have been added since the publication of the list in the last Report :—

BIRTHS.

The number of births registered in 1877 was 888,180 being in excess of the number registered in the previous year. The marriage-rate in the three years 1875-7 was lower than that of the previous three years, and this, to some extent, kept down the birth-rate of 1877, which was nevertheless as high as 36·2 per 1000 of population, a rate somewhat below that of 1876 (36·6), but above the average of the last ten years (35·6).

Compared with the preceding year the only counties in which any increase is observed in the birth-rate in 1877 are Sussex, Suffolk, Devon, Warwick, Rutland, East Riding of York, Cumberland, and the counties of North Wales.

The disparity between the rates in the different counties, owing primarily to difference in the several industries carried on, is remarkable.

If the birth-rate for the whole of England and Wales be taken as a standard, viz. 36·2, there were fourteen counties containing the great centres of the mining and manufacturing industries with high birth-rates, ranging from 37·5 in the counties of South Wales to 43·5 in Durham, and averaging 39·8.

There were as many as thirty counties with birth-rates below this standard, in which the rate averaged 31·5, and ranged from 27·6 in Dorset to 36·1 in Cheshire.

London showed a rate of 36·3, as usual approximating to that of England and Wales.

Sex.—The enumeration of the population of England and Wales at the various Censuses shows that there is an excess of females living over males living, and it is noteworthy that this excess is greater now than it was some years ago.

TABLE XIV.—PROPORTIONAL NUMBER OF MALES LIVING to every 100 FEMALES LIVING (exclusive of the portion of the Army, Navy, and Merchant Seamen abroad).

Census Years.	To 100 Females the Number of Males in England and Wales.
Mean of 1821-31 - -	96·35
„ 1831-41 - -	95·87
„ 1841-51 - -	95·80
„ 1851-61 - -	95·51
„ 1861-71 - -	94·96

Thus to every 100 women living in England and Wales at the Censuses of 1821 and 1831 the mean proportional number of men living was 96·35, but this number fell in 1841 and 1851 to 95·80, and fell still further in 1861 and 1871 to 94·96.

This disparity in the proportion of males and females living is attributable to the higher rate of mortality, and the much greater amount of emigration among males than among females. The emigration returns of 1877 show the relative proportion of the *sexes* of emigrants of *English origin*; when they have been published for a series of years they will throw some light on this interesting point. The number of male emigrants of *English* origin in 1877 was 39,829 and of female 23,882.

More boys than girls are born every year in England and Wales. In 1877 the boys were in the proportion of 103·6 to every 100 girls. The proportions of the sexes are perhaps regulated by some natural law in operation immediately preceding, or at some early stage of, intra-uterine life; probably several other causes also exert their influence, such as the social status and relative ages of the parents at marriage. The excess in the births of males over those of females is believed to be greater among first-born children than it is among those born afterwards.

To whatever influences the relative proportion of the sexes at birth is due, it is well known that an excess in the number of boys born prevails not only in England but among all European races.

Dr. Bertillon and others have collected facts which throw some light on this interesting subject. In the meantime I wish to draw attention to the remarkable fact that this excess in the proportional number of boys born to girls born in England and Wales is less than it was, as will be seen by the subjoined table.

TABLE XV.—PROPORTIONAL NUMBER OF MALES BORN TO FEMALES BORN.

Years.		Males born to every 100 Females born.
In the 10 Years 1838-47	-	105·0
„ „ 1848-57	-	104·6
„ „ 1858-67	-	104·4
„ „ 1868-77	-	103·9

Children born out of wedlock.—The births of 42,155 illegitimate children were registered in England in 1877. This number is 561 in excess of that in 1876, and 1342 in excess of the number in 1875, but considerably below that recorded in previous years; thus the average annual proportion per cent. of illegitimate to total births has declined from 6·4 in the ten years 1855-64, to 5·7 in the ten years 1865-74, and to 4·7 in the three years 1875-77. The results in these three years represent the proportional numbers since the operation of the recent Act by which the registration of births was rendered compulsory.

The counties showing the lowest rates in these three years were Middlesex (*extra-metropolitan*) 3·4, Durham 3·8, Surrey (*extra-metropolitan*) 3·9, Monmouth 3·9, Essex 4·0, Warwick 4·0, Kent (*extra-metropolitan*) 4·3, Hants 4·4, Lancaster 4·4, Gloucester 4·5, Hunts 4·5, Somerset 4·5, South Wales 4·5. The rate in London was as low as 3·7. The counties with the highest rates in these three years were:—Nottingham 6·0, Suffolk 6·0, Cornwall 6·1, Bedford 6·5, North Wales 6·7, Hereford 7·1, Westmorland 7·5, Cumberland 8·2, Norfolk 8·2, and Salop 8·3.

As the rate of illegitimacy in the different counties is, as a general rule, influenced by the proportional number of spinsters living at the child-bearing ages, I thought it would be interesting to keep up the subjoined table which appeared for the first time in my last annual report, and by which it will be observed that in the mining and manufacturing counties such as Durham and Stafford, where the proportional number of unmarried women aged 20-40 enumerated in 1871 was low, the rates of illegitimacy were also low, whereas in the counties of Cumberland, Norfolk, and Salop, with high proportional numbers of spinsters, the per-centage of illegitimate children was also high.

TABLE XVI.—PROPORTION of ILLEGITIMATE CHILDREN to every 100 BIRTHS in the several COUNTIES of ENGLAND and WALES in 1855–64, 1865–74, and in 1875–7.

[Counties arranged according to rates prevailing in 1875–7.]

Norfolk - - - -	10.5	9.6	8.2	39.0
Shropshire - - - -	9.7	9.2	8.3	40.9

A great reduction in the rate of illegitimacy has taken place during the last $16\frac{1}{2}$ years (reckoning from the middle of each of the periods 1855-64 and 1875-7): the reduction per cent. reached 39 in Leicestershire, 35 in Cheshire and Nottinghamshire, 34 in Derbyshire and the North Riding of York, 33 in Essex and Lancashire, 32 in South Wales and Wiltshire, 31 in Berkshire, and 30 in Durham. Indeed, in the whole of England and Wales the fall in the rate in the $16\frac{1}{2}$ years was not less than 27 per cent.

DEATHS.

500,496 deaths were registered in the year 1877 out of an estimated population of 24,547,309, so the mortality was at the rate of 20·4 per 1000.

The death-rate of the previous year (1876) was low, 21·0; but the rate in 1877 was remarkably low and only thrice before in 40 years has it fallen below 21·0, viz., in 1845 (20·9), in 1850 (20·8), and in 1856 (20·5).

Measles was epidemic in some parts of the country, and the deaths from whooping-cough were numerous, but those from scarlet fever and fever were below the average number and—probably owing to a cool summer—diarrhoea was also less fatal than usual; London, however, suffered from an epidemic of small-pox.

Mortality increases in some proportion to density of population, so the death-rate in the urban districts of England and Wales is always in excess of that in the rural districts. In the five years 1851-5 (when the average annual rate of mortality was 25·5 in the urban, and 20·1 in the rural districts) this excess was as great as 27 per cent., but in the two years 1876-7 (when the annual rate was 22·4 in the urban, and 18·4 in the rural districts) the excess was only 22 per cent.

The reduction in the death-rates during these $23\frac{1}{2}$ years (reckoning from the middle of each of the above periods 1851-5 and 1876-7) is equal to 12·2 per cent. in the urban, and 8·5 per cent. in the rural districts.

Testing the mortality of town and country populations in these two ways, it will be observed, first, that the difference between their respective rates has been reduced; and, secondly, that this reduction is chiefly due to the improved sanitary condition of the urban districts.

There has also been an improvement in the health of the rural districts, but not to the extent observed in the urban districts, partly, perhaps, because attention has been concentrated more on the town than on the country districts, and partly because the towns were much more unhealthy than the country, and therefore afforded greater scope for sanitary effort; but the results are encouraging, and show how much the health of the community is under the control of skilful sanitation.

Sex and age.—The numbers of males and females who died in the year 1877 were respectively 260,567 and 239,929. The death-rate of males was 21·8 per 1000 males living; that of females 19·0 per 1000 females living. The average rates in the 25 years 1848-72 were 23·5 for males and 21·4 for females. The deaths of males in the year were as 109 to 100 deaths of females; the average of 40 years being 104 to 100. These proportions are derived from the deaths among unequal numbers living of males and females, for there is an excess of females in the population. The deaths in 1877, were there *an equal number of both sexes* living, would be in the proportion of 115 deaths of males to every 100 deaths of females.

A comparison of the death-rates at different ages in 1877 with the rates in the previous year shows that the reduction in the total mortality in 1877 was mainly due to a much lower rate among children. The exceptionally low mortality from zymotic diseases of childhood, especially summer diarrhoea, is remarkable.

TABLE XVIII.—ANNUAL RATE OF MORTALITY per 1000 Living in ENGLAND AND WALES at DIFFERENT AGES in 1848-72, and in 1877.

85 & upwds.	309·7	284·4	303·3	272·2	- 6·4	-12·2

Compared with the mortality in the 25 years 1848-72 the death-rate in 1877 was less at every period of age among males except at ages 35-65, and less among females at every period except at ages 65-75.

Seasons.—The meteorological phenomena of the first three months of 1877 differed in many respects from the average. The mean temperature of the air ($42^{\circ}\cdot3$) was remarkably high being $3^{\circ}\cdot6$ in excess of the average of the preceding 106 years, and Mr. Glaisher reports that there were but six instances during that period of so high a mean temperature in a March quarter. In January it was as much as $6^{\circ}\cdot2$ in excess, in February it was $4^{\circ}\cdot9$ in excess of the average, and in March it was near the average. 135,000 deaths were registered during these three months, and the mortality was at the comparatively low annual rate of 22·3 per 1000 of the estimated population, the average for the corresponding season in the ten years 1867-76 being 24·3. The rain-fall in these three winter months at the Royal Observatory, Greenwich, measured 8·3 inches or 3·3 inches above the average of the preceding 62 years. In January alone rain fell during 23 days and measured as much as 4·35 inches causing extensive inundations.

The weather continued exceptional during the first two months of the *second* quarter. There were considerable alternations of temperature until about the middle of April, when a cold period followed, and the mean

temperature of the month of May was $3^{\circ}6$ below the average. Sometimes the night temperatures of this month were so low that great damage was done to vegetation. From the 3rd June the weather was warm and the mean temperature of the month was $3^{\circ}1$ above the average. But these exceptional meteorological conditions did not operate very unfavourably on the public health, for the mortality ($21\cdot4$) in the second quarter of the year was only slightly above the average ($21\cdot1$) of the preceding ten years. For the entire quarter the mean temperature ($51^{\circ}9$) and also the rain-fall ($5\cdot3$ inches) were slightly below their averages. In April the fall of rain was $1\cdot5$ inches above, in June $1\cdot3$ inches below, the average.

With the exception of the warm temperature from 13th to 21st August the weather in the *third* quarter of the year was cold and ungenial. The mean temperature of the quarter was $58^{\circ}5$ or $1^{\circ}2$ below the average of the season in 106 years. The month of September was cold and showed a deficiency of temperature of $3^{\circ}7$ compared with the average, and the rain-fall of this month was remarkably small. The fall of rain for the entire quarter measured $6\cdot4$ inches, being one inch below the average amount observed during the last 62 years. The cool summer temperature caused an exceptionally low mortality from infantile diarrhoea so that the death-rate in the third quarter of the year from all causes was remarkably low ($17\cdot7$), indeed it is the lowest rate in forty years, excepting in 1860, when the mortality of the corresponding quarter was but $17\cdot2$.*

The mean temperature of the air in the last quarter of the year was $45^{\circ}0$, the average for the previous 106 years being $43^{\circ}5$. The total rain-fall at Greenwich was $6\cdot9$ inches, the average quantity for the preceding 62 years being $7\cdot1$ inches. The highest and lowest readings of the barometer in the year, in the neighbourhood of London, occurred during this quarter; the highest was on 20th December $30\cdot517$ inches, and the lowest was on 11th November, $28\cdot549$ inches, giving a range of $1\cdot968$ inches. The weather in the month of October was generally fine, but there was a severe gale on the 14th. November was for the most part cloudy and wet with rapid changes of temperature and atmospheric pressure, but the mean temperature of this month was as high as $45^{\circ}5$ being $3^{\circ}2$ in excess of the average of the preceding 106 years. December was foggy and damp, and though almost sunless the mean temperature was $1^{\circ}7$ above the average. The meteorological conditions of these three months did not, however, appear to affect prejudicially the public health, for the mortality was at the annual rate of $20\cdot2$ against an average in the preceding ten years of $21\cdot9$.

Locality.—For purposes of immediate local sanitary administration it is necessary to obtain the number and causes of deaths, and afterwards the death-rates of comparatively small areas, such as the registration sub-district, or the urban and rural sanitary district; still, for many purposes of statistical comparison and investigation, the death-rate of the registration county is useful.

In every county of England and Wales the rate of mortality at all ages was lower in 1877 than the average in the ten years 1867–76 except in Rutland and in Monmouth; and as low as or lower than the rate of the preceding year, except in Oxford, Northampton, Cambridge, Suffolk, Wilts, Warwick, Rutland, Durham, Monmouth, and South Wales.

The death-rate of England in the year under review was $20\cdot4$ per 1000, and there were thirty-two counties with a lower rate than this ranging from $14\cdot8$ in the extra-metropolitan part of Surrey to $20\cdot3$ in Derby. The mortality in the other counties ranged from $20\cdot5$ in North Wales to $24\cdot8$ in Lancaster. In London the rate was $21\cdot9$ against $22\cdot3$ in the previous year.

* For further remarks on the temperature of this summer quarter and its effect on infant mortality from diarrhoea, see Quarterly Return, No. 115, 1877, page vii.

DEATH-RATES OF CHILDREN.

Children under one year of age.—In the year 1877 the proportional number of deaths of infants to births in seventeen of the twenty English towns was lower than in the previous year, but in Bristol, Birmingham, and Plymouth the rates were higher.

The towns are arranged in Table XIX., in the order of their average annual death-rates in the seven years 1870–76; comparing these average death-rates with those in the year 1877, a remarkable improvement is observed. This satisfactory result in each of the twenty towns is chiefly attributable to causes which have already been noticed.

TABLE XIX.—PROPORTIONAL NUMBER of DEATHS of CHILDREN under ONE YEAR of AGE from ALL CAUSES to 1000 BIRTHS REGISTERED in ENGLAND AND WALES, and in TWENTY LARGE TOWNS, 1870–77.

* The rates for England and Wales are for the complete years, and not for the 52 or 53 weeks.

In England and Wales in 1877 the proportional number of deaths of infants to every 1000 births was 136. In Portsmouth it was 133, in

Sunderland 143, in Sheffield 145, in London and in Wolverhampton it was 146, in Bristol the rate was the same as the average for the twenty towns, 154. The death-rates were highest in 1877, in Leicester 189, Liverpool 188, Nottingham 169, Leeds 165, and Birmingham 163.

Children under 5 years of age.—Any excess or defect in the mortality of children under 5 years of age, above or below the average, indicates a rise or fall in the general death-rate at all ages. The death-rates of children of this age in the large towns in the year 1877 are shown in the subjoined table. The towns are arranged in the order of their average annual death-rate in the four years 1873-6.

TABLE XX.—ESTIMATED POPULATION, DEATHS, and ANNUAL RATE OF MORTALITY, of CHILDREN under FIVE YEARS OF AGE, in TWENTY LARGE TOWNS, 1873-77.

NOTE.—The deaths of children under five years of age in sixteen of the above towns were supplied by the Medical Officer of Health.

Compared with this average, the decrease in the mortality of children in 1877 in each of the towns, is remarkable, but more especially so in Newcastle-upon-Tyne, Bradford, Leeds, Sheffield, Leicester, and Nottingham.

Among those with the lowest mortality of children in 1877, Portsmouth stands first with a death-rate of 50·9, then follow Brighton 59·0, Norwich 62·4, Sheffield 66·4, Sunderland 66·6, Newcastle-upon-Tyne 66·9. Among the towns with the highest death-rates in 1877, were Liverpool 89·6, Salford 85·2, Birmingham 84·1, and Manchester 83·1, and Glasgow 81·9.

A comparison of columns 3 and 4 in the Table XXI. (where the counties are arranged in the order of the death-rates under 5 years of age) shows how much the death-rate at *all ages* in the several counties is affected by the mortality of children under 5 years. This relation between the death-

rate of children under 5 years of age, and that at all ages, is seen more strikingly in the five groups of counties at the foot of the table.

* By the death-rate in cols. 5 and 6 is meant the proportional number of deaths of children under one year of age to every 1000 births.

There is no doubt that an exceptionally large proportion of children in a population conduces to a high death-rate, inasmuch as the mortality at early ages, even in a community living under comparatively healthy conditions, is much higher than among adults; thus in the five groups of counties the total mortality follows the same order as the proportions of children living to 10,000 at all ages shown in columns 8 and 9.

There is another cause, however, for the high mortality in some counties, especially in those forming the first group, viz., that they contain large towns with dense populations. Thus Lancashire comprises the towns of Liverpool, Manchester, Salford, and Oldham, then follows Monmouthshire comprising Newport. London stands third, then follow Staffordshire comprising Wolverhampton, and Warwickshire comprising Birmingham, then Nottinghamshire including Nottingham, Leicestershire including Leicester, Durham including Sunderland, and the West Riding of York including Bradford, Leeds, and Sheffield.

It will be seen for the whole country, in Table XXII., how the mortality of the population in the aggregate is made up of deaths occurring at different ages; thus, the death-rate at all ages in 1875 was 22·82 per 1000 of population, in 1877 it was 20·39, so the reduction in the rate in 1877 at all ages was 2·43 per 1000 of population, of which 1·03 was at ages under 5 years.

Deaths in Public Institutions in England.—Increased hospital accommodation, especially in large towns, is greatly needed for the treatment of persons suffering from infectious diseases.

The following table shows the number of hospitals of all classes in England and Wales in each of the nine years 1869 to 1877. The number in 1877 was 644.

TABLE XXIII.--NUMBER OF DEATHS REGISTERED IN HOSPITALS IN ENGLAND AND WALES in each of the Nine Years 1869-77.

1873	500	50	11,209	7594	3615
1874	544	44	11,963	8029	3934
1875	582	38	12,548	8494	4054
1876	611	29	12,354	8148	4206
1877	644	33	12,570	8332	4238

* The large number of deaths recorded in 1871 is owing to the epidemic of small-pox from which the country was suffering in that year. Many temporary hospitals were erected to meet the requirements of persons suffering from this disease.

The number of these institutions has increased from 500 in 1873 to 644 in 1877, but this increase of 144 is mainly attributable to additional accommodation afforded for the sick in cottage hospitals.

The deaths of men in hospitals are about double those of women in each year owing chiefly to men being more exposed in their occupations to accidents and injuries than women.

An enumeration of the patients in hospitals shows that the males are chiefly agricultural and general labourers; seamen; shoemakers; domestic servants; cabmen, coachmen, carmen, carters; carpenters and joiners; coal miners; bricklayers; messengers and errand boys; horse-keepers and grooms; plumbers, &c.; while the female patients are chiefly domestic servants, milliners, dressmakers, and seamstresses; laundresses and washerwomen; charwomen; cotton workers, &c., &c.

The abstracts relating to public institutions show the number of deaths registered in each registration division and county, and in each sub-district, in the year 1877. The total deaths registered in England and Wales were 500,496, out of which number 49,332, or 10 per cent., occurred in 1448 public institutions of England and Wales. Of these 49,332 deaths, 32,096, or 65 per cent., occurred in 721 workhouses, workhouse infirmaries, or workhouse schools, 12,570, or 26 per cent., in 644 hospitals or infirmaries; and 4666, or 9 per cent., in 83 lunatic asylums; so of the total number of persons who died in England in 1877, one out of 10 took place in one or other of 1448 public institutions, one out of 16 occurred in a workhouse, one out of 40 in an hospital, and one out of 107 in a lunatic asylum. Only those deaths registered in workhouses, hospitals, and infirmaries, and public lunatic asylums are returned, inasmuch as the mortality of the respective sub-districts in which they are situated is disturbed principally by these three classes of institutions, and the abstracts of such deaths afford the means of correcting the mortality, which in some districts and sub-districts is unduly raised owing to the number of deaths registered in hospitals and other large institutions within their limits.*

Deaths in Public Institutions in London.—A reprint of the table published in my Annual Summary for 1877, showing the number of deaths registered in *all* public institutions of London, is appended to this Report.†

* See Introductory note p. 99.

† See Preliminary Table, No. 41.

In the fifty-two weeks of that year 14,936 deaths were registered in 172 public institutions. Of every 1000 of these deaths, 611 occurred in fifty-eight workhouses, 4 occurred in twelve prisons, 5 in two military asylums, 289 in thirty-eight general hospitals, 41 in forty-one hospitals for special diseases, 5 in five lying-in hospitals, 14 in four military and naval hospitals, 8 in three hospitals for foreigners, and 23 in nine lunatic asylums.

PROGRESS OF REGISTRATION.

Names on the Registers, and Searches.—The names of 1,777,380 persons, whose marriages, births, or deaths were recorded in the registers during the year 1877 have been added to the printed alphabetical indexes of this office.

The indexes now comprehend an aggregate number of names amounting to 57,657,729, and extend over a period of $40\frac{1}{2}$ years, viz., from the middle of 1837 to the 31st December 1877.

Table XXIV. exhibits the increase in the annual number of searches, but the figures are exclusive of searches in non-parochial registers, and of searches for purposes connected with the Factory Acts.

TABLE XXIV.—TOTAL and AVERAGE ANNUAL NUMBER of SEARCHES, 1845–77.

—	Total Number of Searches.	Average Annual Number.	—	Number of Searches to every 100,000 Names on the Books.
In the years 1845–9 -	4,758	952	In the year 1845 -	8·0
„ 1850–4 -	8,344	1,669	„ 1850 -	7·9
„ 1855–9 -	17,425	3,485	„ 1855 -	11·1
„ 1860–4 -	35,127	7,025	„ 1860 -	19·1
„ 1865–9 -	56,544	11,309	„ 1865 -	24·2
„ 1870–4 -	91,458	18,292	„ 1870 -	33·7
In the year 1875 -	25,407	25,407	„ 1875 -	47·0
„ 1876 -	26,762	26,762	„ 1876 -	47·9
„ 1877 -	27,030	27,030	„ 1877 -	46·9

The provisions of the Registration Act are becoming more generally known by the legal profession, and increasing numbers of certificates are required for proof of death, as well as for pedigree purposes. A considerable number of applications for birth certificates are made by candidates for civil service clerkships, for boys about to be apprenticed, or employed as messengers, &c. for post office purposes.

The greatest number of registration certificates issued is of those relating to births, the number issued of deaths is somewhat less than that of births, and the number issued of marriages is considerably less than the number issued either of births or deaths.

The total number of searches in 1877 (including those relating to the non-parochial and other records) was 27,721, and the number of certificates issued was 22,377.

The amount received as fees and paid into Her Majesty's Exchequer for searches and certificates in the year 1877 was 421*l.* 13*s.* 6*d.*

For a complete list of all the various public registers and records in my custody, I refer to my 34th Annual Report, pp. xxi–ii.

UNITED KINGDOM.

At the middle of the year 1877 the population of the United Kingdom was estimated to be about 33,446,930. The marriage-rate (persons married to 1000 of population) was 14·6, and the birth-rate and death-rate were 34·5 and 20·0 respectively.

The estimated population of Ireland was 5,338,906, against 5,321,618 in 1876, showing an estimated increase of 17,288 persons. The subjoined table shows the number of emigrants from Ireland (Natives) in each year from 1851 to 1877.* During the years 1866–7 emigration from this part of the United Kingdom was comparatively small.

TABLE XXV.—NUMBER OF NATIVE EMIGRANTS from IRELAND in each Year from 1851 to 1877.

Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.	Years.	Total.
1851*	152,060	1856	90,781	1861	64,292	1866	99,467	1871	71,240	1876	37,587
1852	190,322	1857	95,081	1862	70,117	1867	80,624	1872	78,102	1877	38,503
1853	173,148	1858	64,337	1863	117,229	1868	61,018	1873	90,149		
1854	140,555	1859	80,599	1864	114,169	1869	66,568	1874	73,184	Total	} 2,453,481
1855	91,914	1860	84,621	1865	101,497	1870	74,855	1875	51,462	1851-77	

* From the 1st of May, the date at which the collection of these returns commenced.

The marriage-rate in Ireland in 1877 was 9·3, but this requires correction for defective registration, owing chiefly to the neglect of the Roman Catholic clergy.† The birth-rate was 26·2, and the death-rate was 17·5.

The estimated population of Scotland at the middle of 1877 was 3,560,715. The marriage-rate was 14·5, the birth-rate 35·6, and the death-rate 20·8.

Owing to a difference between the marriage laws of Scotland and England, the marriage-rate in England is higher than that in Scotland.

The English birth-rate was 36·2 per 1000 of population, the Scottish 35·6, and the Irish 26·2. As the proportion of married women aged 15 and under 55 to the female population at all ages is considerably lower in Ireland than in England, the number of legitimate births in Ireland, assuming the same degree of fecundity to prevail in both countries, must necessarily be less than the number in England.

The English (20·4) and Scottish (20·8) death-rates were nearly the same. The Irish death-rate, owing chiefly to defective registration, was only 17·5, but the mortality in each division of the United Kingdom was remarkably low during the year 1877.

MORTALITY OF THE ARMY.

No certified copies of the particulars of the deaths in the Army abroad are received at this office, but His Royal Highness the Field Marshal Commanding-in-Chief has favoured me with returns, distinguishing the numbers who died in Great Britain, Ireland, and abroad.

The average strength of the Army at home and abroad in the year 1877 was 190,502, and the number of deaths was 1801; so the rate of mortality was 9·5 per 1000 of strength, or 1·9 per 1000 below the rate in the preceding year.

* See Dr. Burke's report on "*Emigration Statistics of Ireland*" for the year 1877.

† See Thirteenth Annual Report of the Registrar General of Ireland, p. 29.

The average strength of the Army at home was 101,904, and the deaths were 856: the rate of mortality per 1000 strength was 10·7 among officers, and 8·3 among non-commissioned officers and men, the average annual rates in the 16 years 1861–76 being 10·0 and 11·0 respectively; so the mortality among officers serving at home in 1877 was 0·7 per 1000 above the average, while that of the non-commissioned officers and men serving at home was 2·7 per 1000 below the average.

TABLE XXVI.—ANNUAL RATE of MORTALITY per 1000 among OFFICERS and NON-COMMISSIONED OFFICERS and MEN in the ARMY AT HOME and ABROAD, 1861–77.

YEARS.	AT HOME.		ABROAD.	
	Officers.	Non-commissioned Officers and Men.	Officers.	Non-commissioned Officers and Men.
Annually in the 16 years } 1861–76 - - - }	10·0	11·0	13·9	17·8
In the year 1877 - - -	10·7	8·3	12·5	10·6
Excess or defect in 1877 -	+0·7	–2·7	–1·4	–7·2

The average strength of the Army abroad was 88,598, and the deaths were 945. The rate of mortality per 1000 of strength was 12·5 among officers, and 10·6 among non-commissioned officers and men, against an average annual rate in the 16 years 1861–76 of 13·9 and 17·8 respectively. The mortality among officers serving abroad in 1877 was, therefore, 1·4 per 1000 below the average, while that of non-commissioned officers and men serving abroad was 7·2 per 1000 below the average.

Forty per cent. of the British Army were stationed in England and Wales, 2 per cent. in Scotland, 12 per cent. in Ireland, and 46 per cent. abroad.

MORTALITY OF THE NAVY.

Inspector-General T. R. Pickthorn, of the Royal Navy reporting to Sir A. Armstrong, M.D., K.C.B., F.R.S., the Director-General of the Medical Department, states that the sanitary condition of the Navy in the year 1877 was very satisfactory. The total force in the service afloat was 44,940; the deaths were 317, and the mortality per 1000 force was 7·1.

Compared with the mortality in the previous year (when it was exceptionally high, owing to a large number of fatal injuries) there was a reduction in the death-rate from all causes of 2·1 per 1000. The number of deaths in the total force from disease was 221, and from wounds, injuries, and drowning 96. The death-rate from disease alone in 1877 was 4·9, against 6·0 in the previous year; from violence, including drowning, the death-rate in 1877 was 2·1 against 3·2 in the previous year.

Compared with the average of the 14 previous years, there was a decrease in the death-rate of 3·3 per 1000, and in the cases placed on the sick list of 106·3 per 1000. In the ratio of invaliding there was an increase of 1·5 per 1000.

* Including 35 deaths from a boiler explosion in Her Majesty's ship "Thunderer."
† Including the deaths by the loss of Her Majesty's ship "Captain."
‡ Including the deaths by the loss of Her Majesty's ship "Bombay."

Of the 221 deaths from disease, 12 were referred to enteric fever, 12 to remittent fever, 6 to cholera, 46 to consumption, 11 to apoplexy, 15 to heart diseases, 8 to aneurism, 21 to pneumonia, 9 to dysentery, 25 to other diseases of the digestive organs, 8 to kidney diseases, and 4 to delirium tremens. Of the 96 deaths from violence, 45 were caused by wounds and injuries, 2 by burns and scalds, 42 by drowning, and 7 by suicide.

Of 100 deaths from all causes at all ages, forty-three were at ages 15-25, twenty-nine were at ages 25-35, twenty-one were at ages 35-45, and seven were at ages 45 years and upwards.

The mean force employed on the *home* station was 21,000, and the deaths were 130, being in the proportion of 6·2 per 1000, against 9·5 in the previous year, showing a reduction of 3·3 per 1000. The mortality from disease on this station was 4·7 per 1000 force, from violence 1·5 per 1000; against 5·8 and 3·7 in the previous year. The high mortality from violence in 1876, was chiefly owing to a boiler explosion in Her Majesty's Ship "Thunderer," whereby 35 officers and men lost their lives.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Act 37 and 38 Vict. c. 88. commanding officers of British ships not in Her Majesty's service (and commanding officers of foreign vessels trading to or from any port of the United Kingdom) are compelled, under a penalty, to transmit returns of *all* births and deaths occurring on board, to the Registrar-General of Shipping and Seamen, who has to send a certified copy of such particulars to me, and commanding officers of Her Majesty's ships are to forward returns of all births and deaths occurring on board, *direct* to me.

The certified copies of these returns of births and deaths of English subjects on board merchant vessels at sea, as well as those reported to me by commanding officers of Her Majesty's ships, are entered in a book kept for the purpose at this office called the *Marine Register Book*. The numbers recorded in the year 1877 were 354 births and 4338 deaths.

287 births of children and 646 deaths occurred among *passengers* on board merchant vessels at sea.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of mariners at sea, exclusive of masters, in registered vessels, in the year 1877 was 196,562. The deaths from all causes (including some of those which occurred on board colonial and fishing vessels) were 4181, and the rate of mortality was 21·3 per 1000 of strength. The average annual mortality in the 26 years 1852-77 was 21·4 per 1000.

In the subjoined table the mortality in the merchant service by *drowning* is compared with the mortality in the Royal Navy from the same cause.

TABLE XXVIII.—DEATHS by DROWNING in the MERCHANT SERVICE and in the ROYAL NAVY in the Twelve Years 1866-77.

YEARS.	MERCHANT SERVICE.							ROYAL NAVY.		
	Strength.	Deaths by Drowning.*			Mortality per 1000 Strength.			Strength.	Deaths by Drown- ing.	Mortality per 1000 Strength.

1875 -	199,667	1525	987	2512	7·6	5·0	12·6	44,360	41	0·9
1876 -	198,638	1237	1033	2270	6·2	5·2	11·4	45,010	53	1·2
Average in the 11 Years 1866-76 -	199,025	1621	1051	2672	8·1	5·3	13·4	47,350	109	2·3
1877 -	196,562	1461	1077	2538	7·4	5·5	12·9	44,940	42	0·9

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those “reported” in each year.

† Including the deaths by the loss of Her Majesty’s ships “Captain” and “Slaney.”

Thus the total number of mariners drowned in 1877 was 2538 or 12·9 per 1000 strength, viz., 7·4 by wreck, and 5·5 by accident.

The average annual rate in the 11 years 1866-76 was 13·4, viz., 8·1 by wreck, and 5·3 by accident.

The number of deaths by drowning in the Royal Navy in the year 1877 was only 42 out of a total strength of 44,940, and the death-rate was 0·9 per 1000; the average annual rate in the 11 years 1866-76 was 2·3 per 1000.

WILLS.*

The number of probates and administrations granted at the Principal Registry during the year ending 31st October 1877 was 17,178. The value of the effects was sworn under 72,650,940*l*.

* See Judicial Statistics, England and Wales, 1877, Part II., pp. 18, 19.

The number of probates and letters of administration granted in the 40 district registries during the year was 27,483. The value of the property under which these probates and administrations were sworn was 52,896,964*l*.

The results for the Principal and District Registries combined were—probates and administrations 44,661—value of effects sworn under 125,547,904*l*. The average value of each was 2811*l*. against 2779*l*. in the previous year. The proportion of the cases in which people dying above the age of 21 left wills, or left estates on which letters of administration were taken, was 1 in 6, or 17·0 per cent.

Printed Calendars of all grants of probates and administrations from the year 1858 to the present time, showing the names and descriptions of the testators and intestates alphabetically arranged, together with other particulars, are deposited for public reference at this office.

EUROPEAN STATES.

Through the courtesy of the superintendents presiding over the statistical departments of the respective European states, I am enabled to publish for the year 1876 some approximative results, showing the comparative fecundity of married women in the different States.

I pointed out in my 27th Annual Report,* that to ascertain the number of births to a marriage (unless the marriage-rate is stationary) the annual births should be divided by the annual marriages of some previous year. In the following results it has been assumed, in the absence of more precise information, that the interval between the mean age of mothers at marriage, and the mean age at the births of their children, is the same in England and in other countries, as it is in Sweden, viz., about six years. The legitimate births in 1876 have therefore been divided by the marriages of six years earlier date. Thus in Sweden the number of legitimate births in the year 1876, to the *average* annual number of marriages in six years earlier date (1869, 1870, 1871) was 4·84, so the number of children to a marriage in Sweden appears to be nearly the same as the number in England, viz., 4·63.

In Italy the proportional number of births to a marriage was apparently highest, 5·15; but this is probably owing to the fact that all the marriages are not at present registered. Prussia stands next in order of greatest fecundity, and the proportional number was 4·92. In the Netherlands it was 4·83, nearly the same as it was in Sweden. In Belgium it was 4·48, nearly the same as it was in Spain; in Denmark it was low (4·24), and in Austria still lower (3·73), while it was lowest in France, viz., 3·42.

TABLE XXIX.—COMPARATIVE FECUNDITY in different EUROPEAN STATES.

YEARS.	European States.	Births to a Marriage.
1876	Italy - -	5·15
"	Prussia - -	4·92
"	Sweden - -	4·84
"	Netherlands - -	4·83
"	England - -	4·63
"	Belgium - -	4·48
1870	Spain - -	4·47
1876	Denmark - -	4·24
"	Austria - -	3·73
"	France - -	3·42

The respective rates of marriage, birth, and death in the several European States in the year under review are compared in Table XXX. with those of four previous years (1873-76) as they were undisturbed by any fluctuations from war.

The marriage-rate (persons married to 1000 of population) in 1877 was higher in Denmark, in the German Empire, in Prussia, and in the Netherlands, than it was in England. It was lowest in Austria and Sweden, but it was below the average of the four previous years (1873-6) in each of the seven European States from which returns had been received.

Spain* - - -	15·1	—	—	37·2	—	—	29·7	—	—
Italy* - - -	15·4	16·0	15·3	37·4	37·0	36·7	30·2	29·9	28·1

* The mean annual rates for Spain are for the ten years 1861-70, those for Italy are for the ten years 1863-72.

NOTE.—The detailed returns relating to the vital statistics in Foreign States will be found in a series of tables on pp. cix-cxv.

In England the marriage-rate was much below the average, but in Austria and the German Empire the depression was still more marked.

Arranging the countries according to their respective birth-rates in 1877, it will be observed that the German Empire has the highest rate; then follow Austria, Italy, the Netherlands, England, Denmark, Sweden, and France. The birth-rate in Austria and in France was lower than the average of the four previous years, but in nearly all the other States the birth-rate in 1877 was near the average.

The death-rate was highest in 1877 in Austria, Italy, and the German Empire, while Sweden and Denmark had the lowest death-rates; indeed lower than the rate in England.

The death-rate in each of the European States in 1877 was below the average of the four previous years. The *average* death-rate in Hungary (45·0) was remarkably high.

This, Sir, is the last Annual Report that I shall have the honour of submitting to you.

It has been my good fortune to preside over this Department since 1842, and in the course of this year I intend to resign my appointment, as I do not wish to take a *fourth* Census.

In 1842 Civil Registration was in its infancy ; it has been my study to prove that the usefulness of that institution, foretold at its commencement, is realised.

Previously to 1838, marriages of Roman Catholics and of Non-conformists could only be solemnised by ministers of the Established Church ; during the last 40 years the Public have had the option of being married in Roman Catholic and in Non-conformist chapels, or in register offices without religious ceremony, in addition to parish churches. Upwards of 100,000 persons in each year now avail themselves of this privilege ; 60,000 in chapels, 40,000 in register offices.

Previously to 1838, the only documents recognised as attempting to establish the date of birth were the parish registers of *Baptisms* kept by ministers of the Established Church ; and they furnished no real proof of the exact age of the infants whose baptisms were recorded ; during the last 40 years the actual date of birth has been registered together with full particulars as to parents and locality. About 900,000 of these births are annually recorded.

Previously to 1838, *Burials* only were entered in Parish Registers kept by ministers of the Established Church ; during the last 40 years deaths have been recorded in the Civil Register, wherein are stated the place and cause of death, the exact names, occupation, and age of the deceased ; more than 500,000 of these deaths are annually registered.

Statutes provide that, if in these Civil Registers any particular be falsely recorded wilfully, severe penalties are incurred—even penal servitude.

These are improvements which must, I think, be universally acknowledged.

It has been my endeavour in Weekly, Quarterly, and Annual Reports to inform the Public what deductions and inferences may be derived from the facts recorded in these registers ; and I venture to express a hope that, in promoting the study of sanitary subjects, such reports may have been of some use.

Great provision is made for the safe custody of these Civil Registers accessible to the Public in every Poor Law Union, and safeguards are provided against improper alterations of entries being made in them. Copies of these registers and of marriage registers kept by ministers of the Established Church are transmitted to this office, where annually nearly 2,000,000 of names are indexed in strictly alphabetical order.

About 60,000,000 of these separate entries are here accessible to the Public, who in large numbers apply for certified copies under the seal of this office, nearly 30,000 searches being made in a single year.

Here, Sir, I may perhaps be permitted to acknowledge the great improvement made in the system of civil registration by the Statute 37 & 38 Vict. c. 88., which under your auspices was passed in 1874.

It would ill become me to omit mention of the 7,000 registration officers and deputies by whom this great national work is quietly executed at comparatively small cost.

I have no hesitation in assuring you that they admirably perform their simple but important duties.

Of course in the work of so large a number there must be opportunities for captious critics to have the pleasure of noticing practices not altogether in accordance with official regulations ; but I maintain that such opportunities are rare. I should be ungrateful if I did not here record the

gratuitous assistance that I have during a long series of years received from registration officers in furnishing me periodically and with marvellous punctuality returns enabling me to issue to the public my Weekly and Quarterly Reports—returns for which they receive no remuneration.

Under this roof I leave for my successor an admirable staff of most efficient civil servants, who have been engaged in assisting me to take three Censuses, and who from their long experience thoroughly understand the duties assigned to them, and execute those duties with an intelligence, assiduity, and regularity I cannot praise too highly.

Lastly, I must express to Dr. Farr, whom in 1842 I had the good fortune to find here presiding over the Statistical Branch, my grateful acknowledgment of the important services he has ever since continually rendered.

He is acknowledged throughout Europe, the United States, East Indies, and the Colonies as one of the first statisticians of the day.

To his scientific researches and reports I attribute any reputation that may have accrued to the General Register Office of England and Wales from the time he accepted office in this Department.

I have the honour to be,

Sir,

Your faithful servant,

GEORGE GRAHAM,

Registrar-General.

REMARKS ON THE METEOROLOGY OF 1877.

BY JAMES GLAISHER, Esq., F.R.S., &c.

THE following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric Pressure.—The readings of the barometer were very low at the beginning of the year, till January 9th the average daily deficiency of pressure was 0·57 inch; from January 10th to January 19th the pressure was that of its average, the readings being a little in excess for a day or two and a little in defect alternately; from January 20th to February 9th, with the exception of January 25th and January 30th, the pressure was in excess, and for these 21 days the average excess was 0·22 inch; from February 10th to 27th there was an average daily defect of 0·20 inch; then for 4 days there was a daily excess of 0·22 inch; this was followed by a long period of low pressure extending to April 11th, the average daily deficiency for these 39 days was 0·33 inch; till April 20th the mean pressure was that of its average, three days being below and five a little above the average; from April 21st to the end of the month the readings were low, the average daily deficiency was 0·16 inch. The first four days in May the readings were 0·24 inch in excess daily; from the 5th to the 15th the pressure was low, the deficiency being 0·22 daily; they were then high till the 26th, being 0·26 in excess daily; from May 27th to June 9th they averaged 0·32 in defect. A moderately high period set in and continued till the 20th, the mean daily excess for these 16 days was 0·10 inch; three days of low readings followed, the mean defect being 0·22 inch; then eight days of moderately high readings, the average daily excess of pressure was 0·16 inch; to June 30th the readings had been below their averages on 105 days and above on 76 days. For the first few days in July the pressures were nearly those of their averages; from the 7th to the 11th they were in excess of the average to the amount of 0·20 inch daily; from the 12th to the 24th there was a deficiency of pressure daily to the average amount of 0·27 inch; then till August 6th there was a slight excess averaging 0·11 inch daily; from August 7th to September 15th there was a general slight deficiency of pressure, on a few days it was that of its average, and on a few others a little in excess; the average of the 40 days ending September 15th was 0·11 inch in defect of the average. This was followed by nearly as long a period of a general excess of pressure. For the 36 days ending October 21st there was a mean daily excess of 0·25 inch of pressure; this was succeeded by nine days of low barometer readings, the mean defect being 0·18 inch daily; then three days of excess, whose average was 0·27 inch: this was followed by low readings for 10 days, the defect of pressure from November 4th to 13th was 0·42 inch daily; five days of high readings followed, the excess being 0·33 inch daily. From November 19th to December 1st, the readings were continually low and the average deficiency of these 13 days was 0·43 inch; from December 2nd to December 23rd, with the exception of the 6th, 7th, 12th, and 13th, the barometer readings were high, particularly on the 19th and 20th, the average daily excess of pressure was 0·21, and from December 24th to the end of the year the average daily defect was 0·36 inch. From July 1st to December 31st the readings had been below their averages on 95 days and above on 89 days. In the year the three days of greatest departure below their averages were January 1st 1·043 inch, March 25th 0·941 inch, and November 19th 0·964 inch; and the three days of greatest departure above their averages were January 21st 0·720 inch, October 6th 0·775 inch, and December 20th 0·635 inch.

The highest reading of the barometer in the year at the height of 160 feet above the level of the sea was 30·517 inches on the 20th of December, and the lowest was 28·549 inches on the 11th of November; the yearly range was 1·968 inches. The mean monthly range of the barometer varied from 1·1 inch at extreme southern stations to 1·3 inch at extreme northern stations.

Temperature.—The weather was warm from the 1st of January till the 19th of February, the average excess of temperature for these 50 days was 6°·1, causing the winter of 1876-7 to be exceptionally mild. On February 20th a period set in which was distinguished by several days of temperature below their averages, and then followed by a smaller number of days of temperature above their averages; and this variation of temperature, alternately warm and cold, continued till March 23rd; the average daily deficiency of temperature for the 26 days ending March 23rd was 2½°. From March 24th to April 11th the weather was warm, and the average daily excess of mean temperature was about 3°. On the 12th of April a cold period set in and lasted until June 2nd; the coldest days in this period were from May 1st to the 6th, and their average deficiency of temperature was as large as 11½°; at many places on these days the highest temperature reached was below 50°, the temperature of the air at night generally varying from 22° to 32° only. The average deficiency of mean temperature for the 52 days ending June 2nd was 4° daily. From the 3rd of June to the end of the month the weather was somewhat warm, and the average excess of temperature was 2½°. The weather from the 1st of July till the 12th of August was for the most part cold and ungenial; on the 13th a somewhat warm period set in, but only lasted till the 21st; the mean excess of daily temperature for this period was 4¼°. For the 43 days ending August 12th the deficiency of temperature was 1¼°. From the 22nd of August until the end of September the weather was almost continuously cold, and at times painfully so, particularly from the 15th to the 25th of September, when the wind was constantly blowing from the north. The average deficiency of temperature for the 40 days ending September 30th was 3°·1, and the mean temperature of the month of September proved to be *lower* than in any September back to 1803, or a period of 74 years. The month of October opened fine and dry, with a low temperature; on the 14th there was a severe gale, causing great destruction of property all over the country. Till the 19th of October the weather was cold, and the deficiency of temperature for the 19 days was 4¼°. From October 20th to November 4th the weather was mostly warm, but it was occasionally cold; upon the average of these 15 days there was an excess of 2¼°. On November 5th a considerable increase of warmth took place, and continued till the gale of the 11th day (and on which day the lowest reading of the barometer in the year took place), the average daily excess for these seven days was 7¼°; on the 12th, immediately following the gale, a considerable depression of temperature took place, and from this day until the 28th of December the changes of temperature from warm to cold and vice versâ were frequent, the warm periods being somewhat longer than the cold; the average of the 47 days ending December 28th was ¾° in excess of daily temperature. The year closed with three fine warm days, whose mean temperature was 8¼° in excess of the average. The month of December (with the exception of the last three days) was very dark, and almost sunless.

The highest temperature of the air in the year was 87°·5 at Salisbury, and the lowest was 13°·0 at Allenheads.

Rain-fall.—The fall of rain in January was excessive, and about London it fell on almost every day during the first half of the month; and during the whole month it fell on six days out of seven. The amount measured at Greenwich was 4·35 inches; and we have no instance of so

large a fall in the preceding 62 Januaries. The average fall for January is 1·85 inch, so that more than double the average fell in January ; this is even more remarkable as the fall in December 1876 (see Annual Report, 1876) was so excessive. At Helston (Cornwall) there were 11 days in January on which more than a $\frac{1}{4}$ of an inch of rain fell. At Tunbridge (Kent) the total fall of rain in January was 6·38 inches, and there were no less than 27 wet days in the month : through this excessive rain-fall the meadows by the river were under water on no less than nine days. At Cockermouth the fall of rain in January was 8·53 inches, whilst at Holkham the fall in the same month was only 2·50 inches.

The fall of rain in February was 1·7 inch, being 0·2 inch above the average, the fall in March was 2·2 inches, or 0·6 inch above the average, and in April was 3·2 inch or 1·5 inch above the average ; the total fall in the four months ending April 30th, was 11·5 inches, being no less than 4·8 inches above the average. The fall of rain in May was 1·4 inch, being 0·7 inch below the average, in June was but 0·7 inch, being 1·3 inch below the average, and in the preceding 62 Junes there are but seven instances of so small a fall of rain as in the year in question. In July the total fall of rain was 2·4 inch, or 0·2 inch below the average ; in August it was 2·9 inches, or 0·5 inch above the average ; in September it was 1·1 inch, or 1·3 inch below the average ; and since 1815 there have been but nine instances when the fall of rain in September was as small as 1·1 inch. The fall in October was 1·7 inch, being 1·1 inch below the average, in November it was 3·4 inches, 1·1 inch above the average, and in the preceding 62 Novembers, there have been but eleven instances of so large a fall of rain in November as 3·4 inches. At Cockermouth the fall of rain in November was 9·86 inches, being higher than at any station ; it was the wettest November *there* for 16 years, and the fall has not been equalled in any one month since October 1862, when it was 10·4 inches. On the 11th of November (the day of the great gale) the fall of rain at Guernsey was 1·65 inch, at Weybridge was 1·58 inch, and at Marlborough was 1·65 inch, and on this day scarcely any rain fell either in the Midland or Eastern Counties. The fall of rain in December was 1·8 inch, being 0·2 inch below the average. The total fall in the year was 26·9 inches, being 1·6 inch above the average of the preceding 62 years.

The heaviest total falls of rain in the year were 61·93 inches at Allenhurst, 59·94 inches at Stonyhurst, and 59·29 inches at Cockermouth, and the least total falls were 23·85 inches at Cambridge, 25·01 inches at Leicester, and 26·45 inches at Holkham. The greatest number of wet days were 252 at Nottingham, 249 at Eccles, and 246 at Stonyhurst, and the least number of wet days were 173 at Cardington, 176 at Osborne, and 177 at Gloucester.

Wind.—The prevalence of the wind during the year was S. and W. ; in every parallel of latitude the ratio of the S. and W. to the N. and E. was as 2 to 1. During the year the horizontal movement of the air was greater than usual ; it was 312 miles a day. The general average is 257 miles. The average weekly movement for the year was 2,184 miles ; the nearest large values to this were in 1869, 2,043 miles ; in 1876, 2,036 miles ; in 1868, 2,029 miles ; in 1872, 1,998 miles ; in 1867, 1,981 miles. The general weekly average is 1,801 miles. The hourly horizontal movement of the air in 1877 was 13·1 miles, exceeding the general average by 2·4 miles per hour.

The greatest number of miles of horizontal movement of the air in one day was 893 miles on January 30th, and the least number was 67 on December 20th.

The total horizontal movement in the year was 113,943 miles.

Thunder storms occurred on 80 different days during the year. The greatest number of days in one month was 10 in April, and the least 3 in February.

At the same stations the total number in 1876 was 70.

Thunder was heard, but lightning was not seen, on 48 days in the year, of which 11 days were in August, and 8 in June, but in January, November, and December *thunder was heard*, but on one day only in each of these months.

The total number from the same stations in 1876 was 71.

Lightning was seen, but thunder was not heard, on 51 days during the year, 11 of which occurred in November, a rather unusual circumstance.

The total number in the year 1876 was 57.

Solar Halos were seen on 80 days in the year, and the number of days was pretty equally distributed in each month.

The number in the year 1876 at the same stations was 85.

Lunar Halos were seen on 65 nights in the year : May, June, July, and September, were generally free from lunar halos.

The number in the year 1876 at the same stations was 60.

Auroræ Boreales were seen on three days only during the year, viz. 1 day in January at Guernsey, and 2 days in December at Torquay.

Snow fell on 71 days in the year; 17 of these were in March, 14 in January, 12 in December, 11 in February, 6 in both March and April, 4 in November, and 1 in October. The falls in January were most severe in the north, and in February, March, and December the falls of snow were pretty general over the country.

In the year 1876 the number of days on which snow fell was 77.

Hail fell on 109 different days during the year. The greatest number of days in any month was 20 in March, and the least 3 in August and September; in June *no* hail fell.

In the year 1876 the number of days on which hail fell was 80.

Fog prevailed on 149 days during the year (being 11 days less than the number recorded in 1876), and they were distributed as follows:—January 19, February 8, March 18, April 14, May 9, June 10, July 5, August 7, September 11, October 17, November 13, and December 18.

PRELIMINARY TABLES.
(1877.)

TABLE 1.—Estimated **Population**, and Number of **Marriages**, **Births**, and **Deaths** registered in **England**, in each of the Forty Years **1838–77**.

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027

1877	24,547,309	194,352	388,704	888,200	500,496	387,704

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841–51–61–71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, see Table 69.

TABLE 2.—Proportions of Persons Married, Births, and Deaths to 1000 of the Population of England, in each of the Forty Years 1838–77.

YEARS.	TO 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.

Mean in 40 years	16·5	34·1	22·2	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between the ordinary year of 365 days and the leap year.

TABLE 3.—Proportions of Persons Married, of Births and of Deaths to 1000 of the Population of England, during the Forty Years 1838–77.

YEARS.	To 1000 PERSONS LIVING.			THE NUMBER OF PERSONS LIVING.		
	PERSONS MARRIED.	BIRTHS.	DEATHS.	TO ONE PERSON MARRIED.	TO ONE BIRTH.	TO ONE DEATH.
MEAN OF 40 YEARS.						
Forty years 1838–1877 –	16·5	34·1	22·2	61	29	45
MEAN OF 10 YEARS.						
Ten years 1841–1850 –	16·1	32·6	22·4	62	31	45
Ten years 1851–1860 –	16·9	34·1	22·2	59	29	45
Ten years 1861–1870 –	16·6	35·2	22·5	60	28	45
MEAN OF 5 YEARS.						
Three years 1838–1840 –	15·6	31·3	22·4	64	32	45
Five years 1841–1845 –	15·7	32·4	21·4	64	31	47
Five years 1846–1850 –	16·5	32·8	23·3	61	31	43
Five years 1851–1855 –	17·2	33·9	22·7	58	29	44
Five years 1856–1860 –	16·7	34·4	21·8	60	29	46
Five years 1861–1865 –	16·8	35·1	22·6	59	28	44
Five years 1866–1870 –	16·4	35·3	22·4	61	28	45
Five years 1871–1875 –	17·1	35·6	22·0	59	28	45
Two years 1876–1877 –	16·3	36·4	20·7	62	28	49

Note.—The mean rates in this table are the averages of the rates prevailing in each of the forty years given in Table 2.

TABLE 4.—Marriages in England in each of the Thirty-seven Years **1841–77**; those solemnised according to, and not according to, the Rites of the Established Church; Civil Marriages; and detailed information respecting the Marriages in the Churches of the Established Church.

YEARS.		TOTAL MARRIAGES.*	ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.						NOT ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.					
			Special License.	License.	Banns.	Superintendent Registrar's Certificate.	Not stated.	TOTAL IN ESTABLISHED CHURCH.	TOTAL NOT IN ESTABLISHED CHURCH.	In Registered Places.		Superintendent Registrar's Office.	Quakers.	Jews.
										Roman Catholics.	Other Christian Denominations.

Mean Annual Rate per 1000 in each quarter during the 40 years					13·7	16·8	15·9	19·6

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may thus be read without reference to the decimal points :—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 8.—**Marriages in England.** The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Register with Marks**, and of Persons who were **Widowers** or **Widows**, in each of the Thirty-seven Years **1841-77.**

Mean Annual Rate per 1000 in each Quarter during the 40 years					35·7	35·3	32·9	32·7

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, see note to Table 7.

TABLE 16.—Proportional Number of Births in England in each Quarter to 1000 Births in the Average Quarter* of each of the Forty Years 1838-77.

YEARS.	NUMBER OF BIRTHS IN THE AVERAGE QUARTER.	PROPORTIONAL NUMBER OF BIRTHS.				
		In the AVERAGE QUARTER (assumed to be 1000).	FIRST QUARTER ending March 31.	SECOND QUARTER ending June 30.	THIRD QUARTER ending Sept. 30.	FOURTH QUARTER ending Dec. 31.

Average proportion in 40 years, 1838–77			22·2	23·3	21·3	104	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 22·4 deaths of males; to every 1000 females living there were 21·5 deaths of females; and to each 100 deaths of females there were 105 deaths of males. The last column shows the *relative mortality of males and females*; and that out of equal numbers living the deaths of males were as 109 to every 100 deaths of females in 1838.

Mean Annual Rate per 1000 in the four Quarters of the 40 years					24·8	22·0	20·5	21·8

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, see note to Table 7.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in their Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column of Table 39 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the seven years.
† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

TABLE 39.—Population; Births and Deaths; and Rates of Mortality, during the Year 1877 in Fifty large Town Districts.

TOWNS.	ESTIMATED POPULATION in the middle of the Year 1877.*	REGISTERED during the Year 1877.		ANNUAL RATE to 1000 living during the Year 1877.			DEATHS under One Year to 1000 Births registered.	DISTRICTS and SUB-DISTRICTS, taken as approximately representing the several Towns.
		Births.	Deaths.	Births.	Deaths.	Seven Zymotic Diseases.

*E.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the first column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.
† or method of framing these estimates see note * to Table 40. As the population of Devonport, Macclesfield, and Ashton-under-Lyne and between 1831 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the rate of the inhabited houses in these boroughs.
† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Asylums, situate within the Districts or Sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, where the Workhouse is situated outside that area.

TABLE 38.—Annual Rate of Mortality from All Causes and from the Principal Zymotic Diseases in each of the Years 1871-77, in FIFTY LARGE TOWN DISTRICTS.

District Num- bers.	TOWNS. (For Districts and Sub- districts taken as approximately representing these Towns, see Table 39.)	ANNUAL RATE TO 1000 LIVING.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in the Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar-General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column of Table 39 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the seven years.
† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

TABLE 39.—Population; Births and Deaths; and Rates of Mortality, during the Year 1877 in Fifty large Town Districts.

RE.—The letter M or P affixed to the name of each Town denotes whether the limits, within the District or Sub-districts named in last column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

For method of framing these estimates see note * to Table 40. As the population of Devonport, Macclesfield, and Ashton under Lyne and between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the number of the inhabited houses in these boroughs.

The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Asylums, situate within the Districts or Sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, where the Workhouse is situated outside that area.

TABLE 38.—Annual Rate of Mortality from All Causes and from the Principal Zymotic Diseases in each of the Years 1871-77, in FIFTY LARGE TOWN DISTRICTS.

District Num- bers.	TOWNS. (For Districts and Sub- districts taken as approximately representing these Towns, see Table 39.)	ANNUAL RATE TO 1000 LIVING.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in the Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column of Table 39 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the seven years.
† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospital and Lunatic Asylums, situated within the Districts or Sub-districts here taken as representing the town, or by the exclusion or addition of proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

TABLE 39.—Population; Births and Deaths; and Rates of Mortality, during the Year 1877 in Fifty large Town Districts.

NOTE.—The letter M or P affixed to the name of each Town denotes whether the Town, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* For method of framing these estimates see note * to Table 38. As the population of Darlington, Middlesbrough, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, where the Workhouse is situated outside that area.

NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to those cities who died in Workhouses situated outside the Municipal boundaries.

* The figures in this column, excepting those for Nottingham, Salford, Oldham, and Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1877 by the addition of $6\frac{1}{2}$ times the annual rate of increase which prevailed between 1861 and 1871. The rate of increase of population in Nottingham, Salford, and Oldham having since 1871 exceeded that which prevailed during the ten years 1861-71, revised estimates have been adopted for those three boroughs, based upon special returns of inhabited houses now existing within those boroughs. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE 41.—LONDON.—Deaths in Public Institutions in the 52 or 53 Weeks of each of the Thirteen Years 1865-77.*

	1865	1866	1867	1868	1869	1870	1871	1872	1873	1874	1875	1876	1877

* This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1877 will not agree with those given on page 100, which relate to the correct year instead of the 52 weeks; moreover, the same Institutions are not in all cases included in each list.

† Previously to the year 1870 the Royal Naval Hospital at Greenwich was classed with "Military and Naval Asylums"; since that year no In-pensioners have been received there.

Average Number living to One Annual Death in 38 years	42	45	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The deaths used are those registered in each natural year, from 1st January to 31st December. Hampstead and Lewisham did not form part of London prior to 1847. Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE 45.—Births and Deaths in 1877 in 28 Foreign Cities.

CITIES.	AREA in Square Kilometers.	POPULATION (enumerated or estimated).	BIRTHS.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS FROM EPIDEMIC DISEASES.

NOTE.—The numbers for 1837 were registered in the half-year ending 31st December.

TABLE 52.—Area, estimated Population, and Marriages, Births, and Deaths registered in the United Kingdom, in the Year 1877.

	AREA IN STATUTE ACRES.	AREA IN HECTARES.	Estimated POPULATION in the middle of the Year 1877.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM	77,635,801	31,416,757	33,446,930	244,864	489,728	1,154,683	667,995
Great Britain - -	56,815,354	22,991,528	28,108,024	220,142	440,234	1,015,024	574,442
England and Wales -	37,319,221	15,102,008	24,547,309	194,352	388,704	888,200	500,496
Scotland - - -	19,496,133	7,889,520	3,560,715	25,790	51,580	126,824	73,946
Ireland * - - -	20,819,947	8,425,229	5,333,906	24,722	49,444	139,659	93,553

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE 53.—Proportion per 1000 of Marriages, Births, and Deaths to the Population of the United Kingdom, in the Year 1877.

	ACRES TO A PERSON.	HECTARES TO A PERSON.	TO 1000 PERSONS LIVING.			
			MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.
UNITED KINGDOM - -	2·32	·94	7·32	14·6	34·5	20·0
Great Britain - - -	2·02	·82	7·83	15·7	36·1	20·4
England and Wales - -	1·52	·62	7·92	15·8	36·2	20·4
Scotland - - - - -	5·48	2·22	7·24	14·5	35·6	20·8
Ireland - - - - -	3·90	1·58	4·63	9·3	26·2	17·5

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the “density” of the population, or the population to each acre, square mile, or other measure.

TABLE 54.—Population, Area, Births, and Deaths in the Islands in the British Seas in each of the Twenty-seven Years 1851-1877.

TOTAL	1,553,299	5,531,102	1,196,699	258,813	8,544,913
Average annual emigration from the { From 1815 to 1877					135,634
United Kingdom { For the 10 years 1868-77					224,257

* The Customs' returns do not distinguish the emigration to Australia during the 10 years 1815-24, but it appears from other sources that the emigrants who went to this country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; 140,675 in 1875; 109,469 in 1876; and 95,195 in 1877.

In the 26 years 1852-77	4,845,057	103,918	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a *seaman* die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a *passenger* die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE 68.—RETURN of the AGES, RATING, and CAUSES of DEATH of **4,181 Seamen** reported to the BOARD OF TRADE in the Year 1877 as having died in the **British Merchant Service.** (*Parliamentary Return, Session of 1878.*)

TABLE 70.

ESTIMATED POPULATION OF THE UNITED KINGDOM,
(including ISLANDS in the BRITISH SEAS)
with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 69, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

TABLE 71.—Logarithms of the above Populations of the UNITED KINGDOM.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

TABLE 75.—SWEDEN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1850 to 1877.

1876	4,429,713	31,184	62,368	135,890	86,334	14·1	30·7	19·5
1877	4,484,542	30,674	61,348	134,475	83,175	13·7	30·9	18·5

* The populations for these years were enumerated at the respective Censuses. Dr. Berg attributes the decrease observable in the population in the years 1868 and 1869 to failure of crops and consequent emigration.
† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths the highest number in any year since 1801. In 1877 scarlet fever caused 7426 deaths and diphtheria 3367 deaths.

TABLE 76.—AUSTRIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1853 to 1877.
(Furnished by Dr. A. Ficker, the Chief of the Statistical Department of Austria.)

NOTE.—The Returns for Austria include Hungary, Croatia, Slavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 Venetia was included; since 1864, however, it has been excluded. The facts for Hungary and Transylvania for years subsequent to 1867 appear in Table 77.

* Census years.

† Dr. Ficker attributes the excessive mortality in the year 1866 to cholera and the war. Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE 77.—HUNGARY AND TRANSYLVANIA. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1866 to 1877.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

TABLE 83.—SPAIN. Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1861 to 1870.

YEARS.	NUMBERS.					PROPORTIONS PER 1000 OF THE POPULATION.		
	ESTIMATED POPULATION.	MARRIAGES.	PERSONS MARRIED.	BIRTHS.	DEATHS.	PERSONS MARRIED.	BIRTHS.	DEATHS.
1861	15,879,868	130,731	261,462	624,096	417,764	16·5	39·3	26·3
1862	16,065,124	128,696	257,392	615,919	430,663	16·0	38·3	26·8
1863	16,210,263	124,176	248,352	606,800	461,661	15·3	37·4	28·5
1864	16,340,323	126,303	252,606	629,546	499,486	15·5	38·5	30·6
1865	16,423,793	128,917	257,834	622,050	538,580	15·7	37·9	32·8
1866	16,579,090	131,981	263,962	618,981	463,634	15·9	37·3	28·0
1867	16,716,151	118,409	236,818	624,212	487,151	14·2	37·3	29·1
1868	16,853,212	111,684	223,368	579,464	548,690	13·3	34·4	32·6
1869	16,883,986	137,120	274,240	602,287	550,660	16·2	35·7	32·6
1870*	16,935,613	105,543	211,086	599,786	509,669	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE 84.—ITALY (inclusive of VENETIA). Population; Number, and Proportion per 1000, of Persons Married, Births, and Deaths, in each of the Years 1863 to 1877.

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome, where the census was not taken until 1872) is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, without civil contract, not being legally recognized, have not been registered; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE 85.—Fluctuations in the Marriage Rate of England,

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE.	
		Current Events and General State of the Country.	Result of the Harvest.*
1839	15·9	Chartist riots. Chinese war - - - - -	Deficient - - -
1840	15·6	Penny postage came into operation. Canton blockaded -	Do. - - -
1841	15·4	British expelled from Cabul. Revenue deficient - -	Very deficient -

country. The duty varied with the price of corn in the home market; thus, when the average price was 38s. and so that when the price reached 73s. per quarter the duty was only 1s. By Act 5 Vict. c. 14, popularly known as uniform rate of 1s. per quarter, but owing to the "*partial failure of certain crops*") by Act 10 & 11 Vict. c. 1 till 1st March 1848; by Act 12 & 13 Vict. c. 90, however, the duty was to be paid from and after the passing of charged, and by Act 32 & 33 Vict. c. 14 the duty after 1st June 1869 ceased altogether.

et seq., and for most of the years 1855-1877 the information has been extracted from the "*Mark Lane Express*."

TABLE 86.—Changes in the Constitution of the Superintendent Registrars' Districts and Registration Sub-districts during the Year 1877.

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District and Sub-district.]

Superintendent Registrar's DISTRICT and Registrar's <i>Sub-district</i> in which a change was effected, or from which a transference was made.	Date of Change.	Place and Population (1871) transferred from the District in Column 1 to the District in Column 4.	Superintendent Registrar's DISTRICT and Registrar's <i>Sub-district</i> in which a change was effected, or to which an addition was made.
SHOREDITCH (14) : <i>Haggerston West</i> (5) <i>Haggerston East</i> (6)	1st July "	Haggerston West Sub-district - 24,162 Haggerston East Sub-district - 19,259	The two Sub-districts of <i>Haggerston West</i> and <i>Haggerston East</i> united for Registration purposes, and to form one Registrar's Sub-district, viz. the " <i>Haggerston Sub-district</i> " (5).
WOODBIDGE (214) : <i>Woodbridge Out</i> (4). <i>Carlford</i> (1) -	1st Jan. "	Woodbridge Out Sub-district - 3,701 Carlford Sub-district - 5,060	The two Sub-districts of <i>Woodbridge Out</i> and <i>Carlford</i> united for Registration purposes, and to form one Registrar's Sub-district, viz. the " <i>Carlford Sub-district</i> " (1).
SHEPTON MALLET (313) : <i>Stoke Lane</i> (1) <i>Shepton Mallet</i> (3).	1st Oct. "	Stoke Lane Sub-district - 3,369 Shepton Mallet " - 7,824	The two Sub-districts of <i>Stoke Lane</i> and <i>Shepton Mallet</i> united for Registration purposes, and to form one Registrar's Sub-district, viz. the " <i>Shepton Mallet Sub-district</i> ," and to be renumbered (1).
CLIFTON (321) - - - - -	1st April	Clifton District - - 128,084	The Superintendent Registrar's District of CLIFTON renamed BARTON REGIS.
PENKRIDGE (371) - - - - -	1st April	Penkridge District - - 23,705	The Superintendent Registrar's District of PENKRIDGE renamed CANNOCK.
BIRMINGHAM (387) : <i>St. Philip</i> (4) -	1st July	All that part of the parish of Birmingham which formed the Sub-district of <i>St. Philip</i> up to 30th Sept. 1876 - 7,779 All that part of the parish of Birmingham which formed the Sub-district of <i>St. Paul</i> up to 30th Sept. 1876 - 7,394	BIRMINGHAM (387) : <i>St. Thomas</i> (2). BIRMINGHAM (387) : <i>All Saints</i> (6). The Sub-districts of— <i>St. Mary</i> to be renumbered (4). <i>St. George</i> " " (5). <i>All Saints</i> " " (6).
DERBY (438) : <i>St. Alkmund</i> (1) - - <i>St. Peter</i> (2) - - -	1st July "	St. Alkmund Sub-district 18,910 St. Peter " - 43,423	The two sub-districts of <i>St. Alkmund</i> and <i>St. Peter</i> were united for Registration purposes, and to form one Registrar's Sub-district, viz. the " <i>Derby Sub-district</i> " (1).
BRADFORD (496) : <i>Idle</i> (11) - - -	1st July	Bolton Township - - 1,271	BRADFORD (496) : <i>Bradford East End</i> (5).
LLANDOVERY (591) : <i>Myddfai</i> (3) - <i>Llandingat</i> (5) -	1st April "	Myddfai Sub-district - 964 Llandingat " - 2,379	The two Sub-districts of <i>Myddfai</i> and <i>Llandingat</i> were united for Registration purposes, and to form one Registrar's Sub-district, viz. the " <i>Llandingat Sub-district</i> ." <i>Llandingat</i> to be numbered (4), and the following Sub-districts, viz. :— <i>Llanfairarybryn</i> to be renumbered (5). <i>Llanwrttyd</i> " " (6). <i>Cilcwm</i> " " (7). <i>Conwil Cayo</i> " " (8).
PRESTEIGNE (607) : <i>Presteigne</i> (1) -	1st July	Byton, Combe, Knill, Lingen, Lower Kinsham, Rodd, Nash and Little Brampton, Stapleton, Upper Kinsham, and Willey - 1,262 Cascoed, Discoed, Litton and Cascoed, Norton Pilleth, Presteigne, and Whitton - 2,607	KINGTON (343) : <i>Kinsham</i> (4) a new Sub-district. KNIGHTON (608) : <i>Presteigne</i> (1) a new Sub-district. <i>Knighton</i> to be renumbered (2). <i>Llanbister</i> " " (3).

NOTE.—In the various Tables of Abstracts given in this Report, the area and population are stated for the above Districts according to the alterations here indicated.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1877.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 52 cases of marriage after divorce, see Table 12, page lviii.

* For the changes made in the constitution of the Superintendent Registrar's District of Knighton (608) through the abolition of the district of Presteigne (607), see Table 86, page cxx.

† At the end of the year 1877, the number of Superintendent Registrars' Districts was 631. The numerical arrangement, 1 to 627 was adopted on 1st January 1871. Six new Superintendent Registrars' Districts, viz., Fulham (1a), Prestwich (467a), Barrow-in-Furness (481a), Middlesbrough (532a), Lanchester (546), and Pontardawe (587a), have been constituted since 1871; and two Superintendent Registrars' Districts have been abolished, viz., Shrewsbury (352), which has been incorporated with Atcham (351), and the parishes forming the District of Presteigne (607) have been added to the Superintendent Registrars' Districts of Kington (343), and Knighton (608).

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).
† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1877—continued.

* The Superintendent Registrars' Districts (631 in number at the end of the year 1877) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

* The Sub-districts (2185 in number at the end of the year 1877) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1877 are given on pages 90-120.

* 14 : 5.—Haggerston sub-district consists of those two divisions of the civil parish of Shoreditch, which, prior to the 1st July 1877, formed the sub-districts of Haggerston West (14 : 5), and Haggerston East (14 : 6). See Table 86, p. cxx. In this table of Births and Deaths the facts are inserted as if the alteration had taken place on 1st January 1877.

* 343 : 4.—The new sub-district of Kinsham was constituted on the abolition of the Superintendent Registrar's district of Presteigne (867) from 1st July 1877. See Table 86, page cxx.

† 351 : 8 & 9.—The sub-districts of St. Mary and St. Chad, which formed the district of Shrewsbury previously to 1st October 1871, were on that date annexed, without change in their limits, to Atcham.

DEATHS IN PUBLIC INSTITUTIONS, 1877.

THE following pages contain the numbers of deaths registered during 1877 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1448 Institutions; of which 721 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 644 Hospitals or Infirmaries; and 83 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1448 Institutions 49,332 deaths were registered during the year, or 9·9 per cent. of the total deaths in England and Wales, against 8·8 and 9·1 per cent. in the two preceding years; 32,096 occurred in Workhouses, 12,570 in Hospitals, and 4666 in Lunatic Asylums. Each of these totals exceeded the corresponding number in 1876, and the proportion to total deaths was 6·4 in Workhouses, 2·5 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1877.

NOTE.—The Table may be read thus : Of the 260,567 deaths of Males, 67,616 were those of children under 1 year of age ; 21,298 those of the age 1 and under 2 years ; 8,987 of the age 5 and under 10 years ; 5,854 of the age 15 and under 20 years, and so on.
* This column includes the deaths of 22 males registered as aged 100 years and upwards ; namely, 10 aged 100, 4 aged 101, 6 aged 102, one aged 103, and one aged 105 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 33, page lxxviii, of Report.
The Causes of Death in England and in London, in combination with the Ages at Death, are given at pp. 146–161.

1877.

CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND
AND LONDON.

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES,
AND DISTRICTS.

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated “Heart Disease,”—in a certain number of instances the precise nature of the malady is given, in other instances all that is recorded is the disease of the organs without any further distinction.

APPENDIX.

LETTER to the REGISTRAR GENERAL on the CAUSES OF DEATH
in ENGLAND AND WALES, by W. FARR, Esq., M.D., F.R.S.

YEAR 1877.

SIR,

In your Report you show that the mortality in the year 1877 was exceedingly low. Upon examining the causes which have been less than usually fatal, it will be found that there was a considerable decline from 1875 in the zymotic class; a decline also in the class of constitutional diseases, and in the developmental diseases, and a slight decline in the deaths by violence. The class of local diseases was rather unusually in excess of the average.

I.—ZYMOTIC DISEASES.

Diarrhœa was much below the average. It only destroyed 601 lives in 1,000,000, the average being 891. Small-pox (higher than in the preceding four years) was much below the average; so were measles, scarlet fever, croup, whooping-cough, and fever. Rheumatism was unusually fatal, as it had been in the three previous years.

87,043 deaths occurred from zymotic diseases; 79,640 from miasmatic diseases, of which 4278 were caused by small-pox, 9045 by measles, 14,456 by scarlet fever, 2731 by diphtheria, 3910 by croup, 11,358 by whooping-cough. These diseases affect children chiefly, but in different degrees: thus, whooping-cough of the 11,358 victims counted 11,016 under 5 years of age, of whom 5968 were girls, 5048 were boys; croup of 3910 counted 3318 under 5 years of age. Measles was fatal to 8377, out of 9045, under 5 years of age, of whom 4380 were boys and 3997 were girls; small-pox was fatal to 1056, out of 4278, under 5 years of age; scarlet fever to 9377 out of 14,456; diphtheria to 1456 out of 2731. The air passages are easily obstructed in the first years of life, which will account for the excess of deaths from whooping-cough and croup; and also partly for the excess of deaths from measles in the first five years of life. Fever is a type of the diseases that are most fatal in the prime of life; thus of the 6879 deaths from enteric fever at all ages, 1131 were of children under 5 years of age, and 987 were of persons of the age 25 and under 35, the age at which the greatest number of adult deaths are recorded from that form of disease. Diarrhœa is excessively fatal in the first five years of life. Rheumatism is most fatal at the ages 25-35 and 65-75. Erysipelas caused 693 deaths of children under one year of age, and 271 of persons aged 65-75. Enthetic diseases were fatal to 2436 persons; 2085 of whom died of syphilis, 268 of stricture of urethra, 79 of hydrophobia, and 4 of glanders. The deaths from syphilis in the last three years have been 90, 89, and 86 to 1,000,000 living. In the five previous quinquennials the proportions were 37, 51, 64, 82, and 81; so that there has really been an increase in the three years over the two previous quinquennials; but at the same time there is a tendency to decline in the last two years. The great majority of the deaths were of infants in the first year of age; who it is plain had been infected by the parents. It is one of the sad features of

this disease that life is poisoned at its source; and in the efforts that are made to diminish the prevalence of the disease, we must bear in mind that not only the persons who have been guilty of actively propagating the disease are involved, but innocent children are the principal sufferers. 1551 were children in 1877 under one year of age; 171 were one and under 5; and 363 were 5 years of age and upwards of whom 206 were females, and 157 were males. Stricture of the urethra, the result of gonorrhœa in men, was the cause of 268 deaths.

Hydrophobia has been much more prevalent in the last eight years than it was previously. To 1,000,000 living less than one (0.3) death annually was ascribed in the five years 1860-4; in the next two quinquennials the proportion rose to .9 and 1.8 deaths; in the last three years the mortality was 2, 2, and 3. Thus the proportion was ten times as great in 1877 as in the years 1860-4; glanders is rarely fatal, and it shows no increase.

Among dietetic diseases there are some notable changes. Thus the deaths from privation which had been 3.8 declined to 2 in 1,000,000 in the last year. Purpura and scurvy were unusually fatal; the deaths which were 18 in 1,000,000 in the 25 years 1850-74, rose to 22, 26, 31 in the last three years. Alcoholism, which was fatal to 40 in 1,000,000 in the 25 years 1850-74, was fatal to 48, 46, and 47 in the three years 1875-6-7.

Parasitic disease was less fatal in 1877 than in previous years.

II.—CONSTITUTIONAL DISEASES.

Diathetic diseases are less fatal than they were; this decline is due to dropsy which is now frequently classed under heart or kidney diseases by which it is assumed to be caused. Gout is twice as fatal as it was fifteen years ago. There is no doubt that this is partly due to excesses of the table, which are producing more fatal effects every year, and which deserve to be watched with as much attention as alcoholism. Cancer is one of the saddest diseases to which mankind is liable; and it is unfortunately on the increase. In the five quinquennials 1850-74 the annual mortality was 302, 327, 369, 404, and 443 to 1,000,000 living: while in the last three years the annual deaths were 480, 481, and 496. This high mortality well deserves special investigation; and is recommended to the attention of the pathological society. Is there any ground for supposing that it is transmissible from person to person?

There is a decided tendency in tubercular diseases to decline; thus the annual proportion of deaths to 1,000,000 was in the five quinquennials 1850-74, 3655, 3448, 3368, 3326, and 3018: in the twenty years the decline was 637, and in the last three years there has been a further decline which has brought the number down to 2884. Unfortunately there has been a countervailing increase in diseases of the respiratory organs, so that there is reason to suspect that the change is partly due to nomenclature.

III.—LOCAL DISEASES.

The proportional number of deaths due to diseases of the nervous system was 2761 to 1,000,000. The deaths ascribed to apoplexy were 13,283 and to paralysis 11,937. 1509 deaths were ascribed to insanity, by which it must not be understood that this was the total number of insane persons who died in the year; but the number of the insane whose deaths were referable to no other disease. The greatest number of deaths was ascribed to convulsions, 24,147; that is more than one-third of the total of 67,514 deaths referred to the diseases of the nervous system. 19,236 were of infants under one year of age; of whom 11,105 were boys and 8131 were girls.

34,330 persons died of diseases of the organs of circulation. The increase has been great since 1850 when only 11,356 were referred to this

head. In the last year the increase was 2379 : 820 deaths were due to aneurism ; 708 to pericarditis, carditis, or endocarditis ; 452 to angina pectoris, of whom 298 were males, 154 were females ; 1998 to syncope ; 388 to embolism or thrombosis, of whom 139 were males, 249 were females ; 51 to varicose veins, of whom 15 were males and 36 were females. 29,247 deaths were returned simply as from heart disease.

88,543 deaths were ascribed to diseases of the respiratory organs ; the greater number, 54,006, to bronchitis, and 23,695 to pneumonia. The mortality from these diseases was 3620 out of 1,000,000 living.

The deaths due to diseases of the digestive organs were 24,603, or 1006 out of 1,000,000 living ; 499 deaths were due to ascites, of which 301 were of females, 198 of males ; 1094 were the result of hernia, 565 in males and 529 in females.

Of urinary diseases 10,294 persons died ; 6659 were males, 3635 females ; for obvious reasons these diseases are much more prevalent and fatal in the male than in the female. Bright's disease is the most fatal disease now recognised, and to it 4763 deaths were referred of which the numbers of males and females were 2692, and 2071. Diabetes was fatal to 1006 persons, of whom 663 were males, and 343 were females. To calculus and gravel 245 deaths were directly ascribed, 206 were of males, 39 were of females. To Addison's disease 92 deaths were referred, 51 of males, 41 of females.

To the diseases of the organs of generation 1400 deaths were due, 64 in males, 1336 in females. Among the deaths of males 10 are referred to orchitis, 2 to hydrocele, 36 to disease of perineum. Of the deaths of females 355 are ascribed to ovarian dropsy, 96 to ovariectomy, 762 to disease of the uterus. The deaths due to ovarian dropsy were at a minimum in 1874 when 168 deaths were recorded ; the deaths from this disease were 219 in the year 1850. In 1875 a sudden start took place and in that and in the two years following the deaths were 343, 327, and 355. To what is this due ? It is impossible to say ; but it is possible that in the first years of the introduction of the operation by Spencer Wells, the great care taken in the operation prevented deaths, which, now the operation has become common, are its more frequent consequences.

Diseases of the organs of locomotion occasioned 2373 deaths. Mollities ossium is mentioned as the cause of 18 deaths, five were of boys under 5 years of age, one of a man aged 20-25, 12 were of adult women.

Diseases of the integumentary system caused 2054 deaths, including 444 by phlegmon, 8 by whitlow, 584 by pyæmia, 401 by ulcer, 343 by eczema, 16 by elephantiasis.

IV.—DEVELOPMENTAL DISEASES.

71,906 deaths were due to developmental diseases ; including 18,179 to developmental diseases of children, 2116 of adults, 26,078 of old people, and 25,533 to diseases of nutrition. 11,618 of the children's deaths were of children prematurely born ; 4470 were referred to teething ; 2091 to malformations of various kinds, namely, 844 to cyanosis, 653 to spina bifida. Here note that there is a great excess of males who died of cyanosis, and of females in the deaths from spina bifida. 3443 mothers died of metria, or of the accidents of childbirth, or 3.9 to every 1000 children born alive, the average since 1847 was 5 per 1000.

V.—VIOLENT DEATHS.

17,684 deaths by violence were recorded in the year, and this implies a mortality of 723 to 1,000,000 ; this is lower by 70 than was observed in the year 1875.

There has been a great decrease in the deaths by "burns," which were 138 to 1,000,000 living in 1862 and were 90 in 1877. The decline has

been progressive since 1860-4 when the deaths by burns were 147 in 1,000,000; in the two following quinquennials the deaths were 122 and 107; in the last three years the decline was still more startling; it was 109, 102, and 90. The deaths ascribed to suffocation showed increasing numbers; the proportions were 57, 61, and 67 in the three quinquennials 1860-74; 72, 71, and 69 in the last three years. Fractures and contusions have grown more fatal.

Homicide has been less fatal than it was; suicide was slightly more fatal than it was, the increase being due to drowning. Executions have been more common in the last three years than they were in the three previous quinquennials.

The tables (p. 198-221) show in detail a classification of injuries which proved fatal. The first class shows that 1106 males and 77 females were killed on railways. The Board of Trade returns show 1175 deaths by the same causes in the *United Kingdom*; including 126 of passengers, 642 of officers and servants of the companies, and 407 of trespassers, or suicides, or other persons who met with accidents at level crossings, or from miscellaneous causes. The deaths of passengers, servants, and others returned to the Board of Trade for England and Wales were 959; a number less by 224 than the numbers returned to the Registrar General, which are undoubtedly the more complete of these two returns. It is probable that the whole number of passengers and others who die of the remote consequences of injuries are not returned to the Board of Trade. It will be noticed that few boys were killed on railways, 7 only were under 5 years of age, 28 were 5-10, 54 were 10-15; the greatest number of males, 233, were of the age of 25-35. Of the 77 females, 6 were under 5 years of age, 5 were 5-10, and 6 were 10-15, 8 were of the age of 25-35, 17 of the age 35-45, 5 of the age 45-55, 10 of the age 55-65, 9 of the age 65-75, and 3 of the age 75-85. It is plain from these returns that the travellers killed by railways are chiefly men, most of whom are in the prime of life.

909 males died of injuries in mines; 823 in coal mines and 86 in mines of copper, tin, iron, or other minerals; only 4 women, two of whom committed suicide by throwing themselves down shafts, were killed in mines. It is worthy of remark that while 72 men died by explosion, 2 by burns, and 61 by choke-damp, 399 were killed by the fall of coal, stone, &c., and 53 were crushed. All these deaths occurred to adult men in coal mines.

5049 males and 1396 females died of mechanical injuries of various kinds. Of the numbers so returned, 243 males were killed by injuries from horses and other animals; 43 by carriages, 26 by omnibuses, 14 by tram cars, 33 by cabs, 325 by vans or waggons, 26 by drays, 535 by carts, and 71 by other conveyances. Thus it will be found that of males 1073 were killed by horse conveyances, and 243 by horses, making in the aggregate 1316; of females only 18 died of injuries from horses, 189 from horse conveyances; 1523 were the total deaths from horses or horse conveyances, which thus exceed the deaths by railways. More persons are perhaps exposed to accidents of that kind than the travellers on railways. If a new means of conveyance has been introduced by the bicycle, a new cause of death has also been introduced: one child and five men died by bicycles.

By chemical injuries 1445 males and 1344 females died. Burns and scalds make up the majority of cases; they constitute, exclusive of deaths by explosions and by lightning, 2049 of the deaths. 559 males died of burns, 359 of scalds; 824 females died of burns, and 271 of scalds; one man, 20 boys, and 15 girls died by drinking scalding water. The girls wear combustible dresses of cotton or linen; the boys wear woollen dresses, which are, comparatively speaking, incombustible: this accounts for a difference of 265 deaths in the deaths by burns. Ten men and 2 women died by lightning; 67 males died by sunstroke, 15 females died

of the same cause; 86 deaths of males, 32 deaths of females, were ascribed to gelatio or cold.

311 males and 173 females died of poisoning: 46 males and 12 females by lead; 20 males and 11 females by carbolic acid; 38 males and 25 females by laudanum and syrup of poppies; 25 males and 11 females by alcohol.

There were 2728 deaths of males by drowning, of whom 169 were drowned while bathing, 2 while skating or sliding, 76 by upsetting of boats. One female was drowned while bathing, 8 were drowned by upsetting of boats: in all 666 females were drowned. Thus 3394 persons were drowned whose deaths were registered. This is exclusive of many of the merchant seamen and men and officers in Her Majesty's Navy drowned.

347 deaths were homicides; a great part of them were infanticides, namely 78 boys, and 64 girls; thus leaving 205 deaths by murder and manslaughter. There were only 14 killed by human agency out of 1,000,000 living; or one in 1427 of the deaths were caused wilfully by criminals.

Violent Deaths and Homicides in Italy and in Eleven other Countries.

This presents a considerable contrast with what is observed in Italy. There the homicides amounted in 1876 to 1504*; against 412 recorded in England and Wales during that year. Thus to 1,000,000 of population there were 54 homicides in Italy against 17 in England. If we had the same proportion the homicides would have amounted to 1309 in England and Wales. In Rome the proportion is much higher: it is 141 in Rome, in Sicily 137. The practise of assassination is thus shown to yield these terrible results.

Although the results in England are so much more favourable as regards homicide than in Italy, it is the reverse with other violent deaths: there the violent deaths in 1876 were 6656 against 18,358 (exclusive of executions) in England; or 240 in 1,000,000 of population in Italy against 757 in England.

If we deduct the 1024 suicides and 1504 homicides, there will remain 4128 violent deaths in Italy; from which we deduct also 47 deaths from intemperance, and 6 from hydrophobia and bites of vipers, and one by privation. To render them comparable with the English returns we obtain 4074 which are thus accounted for:—

Deaths by Violence in Italy in 1876.

* The homicides are thus classified according to the returns made to the "Stato Civile": involuntari 285; voluntari 1163; infanticide 56. They are little more than half the number given by the Judicial Statistics. There is no coroner's inquest in Italy.

Upon comparing these with the English returns the difference is evident. There are no mines in Italy; and the physical forces set in motion by coal are much less than in England and Wales. The railway accidents and burns are less fatal there than in this country. Upon looking back to the state of England in the last century we shall find a state of things very like what is prevalent now in Italy, and our progress in the industrial arts has been accompanied by hecatombs of deaths which it becomes necessary to endeavour to avert by special measures. The genius of the country has been directed to the achievement of certain works, and has never asked at what expense of life. The time has come to ask at what cost? and to consider carefully how life may be saved. For though there are fewer homicides in England and Wales than in Italy, it must be recollected that the lives are equally sacrificed by negligence as if they were taken by the red hand of the murderer. The 574 lives lost in the "Princess Alice" were lost to the country as completely as if they had been deliberately sunk in the Thames. Then does it not follow that the thousands of lives lost in England are of little less importance than if they fell under the hand of the assassin? The mine inspectors and the railway inspectors are well employed if they suggest improvements by which life may be saved; and the same analogy would lead us to try how far similar minds may be directing to the suggesting ways of saving life. The medical health officers will be well employed in this direction.

It will be seen in the annexed table that the United Kingdom is at the head of every country except Switzerland in the number of violent deaths. The avalanches and falls down precipices no doubt give Switzerland its fatal pre-eminence.

TABLE showing the POPULATION in 1876, and the NUMBER of DEATHS from VIOLENCE, distinguishing those from SUICIDE, HOMICIDE, and ACCIDENT in each of the under-mentioned COUNTRIES.

COUNTRIES.	Popu- lation, 1876.	Deaths from Vio- lence.	Suicide.	Homi- cide.	Acci- dent and Negli- gence.	Proportion to 1,000,000 living.

Italy - - - - -	27,769,475	6,656	1,024	1,504	4,128	240	37	54	149

* The above facts given for Norway are for the year 1873, for Scotland 1875, for Finland 1874, and for Prussia 1875.

† The figures for the *United Kingdom* relate to the population inclusive of the Royal Navy and Merchant Service.

‡ The difference between Scotland and England may be partly accounted for by the returns for England being made by coroners juries and in Scotland by the sheriff substitute: of 430 persons apprehended for murder or manslaughter, and 417 cases of inquest in which the verdict was murder, or manslaughter, or homicide, 247 prisoners were committed for trial in England.

PROXIMITY OF POPULATION.

I am indebted to Dr. Robertson of Edinburgh for the following communication :

‘ In letters that have reached the Registrar-General of Scotland some doubts have been expressed as to the accuracy of the formula connecting Density with Proximity. Dr. Farr has most kindly communicated to the Statistical Superintendent the following full account of the mathematical reasoning which originally led him to the establishment of the formula, and which may be regarded as a demonstration of its accuracy :—

‘ DENSITY AND PROXIMITY.

‘ The density of the population is determined by dividing the population of the country or district by the area. Prony calls this the specific population. It may be described thus :

$$d = \frac{P}{A}, \text{ where } P \text{ represents the population and } A \text{ the area.}$$

‘ It is assumed that the population is evenly distributed over the area.

‘ Now, let a be the area to each person ; then $a = \frac{A}{P}$; it is the reciprocal of d , or $a = \frac{1}{d} = \frac{A}{P}$. This a may be called the *areality*.

‘ Now, upon the same hypothesis of even distribution over the area, what is the *proximity* of person to person ?

‘ In England the areality (in 1878) is 7267 square yards to each person ; for the population is 24,854,397, and the area is 58,311 square miles, or 180,625,029,640 square yards. So areality, or $a = 7267$ square yards. If areality is 7267 *square* yards, then proximity is 91.604 *linear* yards.

‘ Any other unit might be taken to express the proximity and the areality. But if the areality is expressed in square miles, the proximity must be expressed in linear miles ; if in square yards in linear yards ; if in square metres in linear metres. The yard or the metre is the most convenient unit by which to express the proximity.

‘ PROXIMITY.

‘ To explain its derivation from the given *areality*. All the persons of the population may be conceived as in the centre of plots of ground in equal hexagonal forms ; then if the area of the hexagon is known the mean distance from person to person is known. The proximity is a function of the areality.

‘ Strike a circle with radius r , then inscribe therein a hexagon H_1 with the side r in the usual way ; construct six similar hexagons on the six sides. The line AA' from the centre A of H_1 to the centre A' of H_2 represents the proximity p ; $AA' = AC + CA'$ where $AC = CA'$.

‘ And as $AC = r \cos 30^\circ, p = 2r \cos 30^\circ,$
 Now $BC = r \sin 30^\circ$; and $BD = 2r \sin 30^\circ,$
 And $r = \frac{p}{2 \cos 30^\circ} = \frac{p}{2 \times \frac{\sqrt{3}}{2}} = \frac{p}{\sqrt{3}}. \quad (\text{Equation 1})$

‘ The area of the triangle

$$ABD \text{ is } BD \times \frac{AC}{2} = 2r^2 \sin 30^\circ \cdot \frac{\cos 30^\circ}{2} = r^2 \sin 30^\circ \cdot \cos 30^\circ;$$

but there are six similar triangles in the hexagon (H_1), the area of which is therefore—

$$a = 6r^2 \sin 30^\circ \cdot \cos 30^\circ.$$

But $r \sin 30^\circ = \frac{1}{2}r$; and $r \cos 30^\circ = \frac{\sqrt{3}}{2}r$;

$$p = 2r \cos 30^\circ = 2 \cdot \frac{\sqrt{3}}{2}r = \sqrt{3}r \therefore r = \frac{p}{\sqrt{3}}.$$

‘ By substituting for r its equivalent $\frac{p}{\sqrt{3}}$ in equation 1, we have instead of

$$a = 6r^2 \sin 30^\circ \cdot \cos 30^\circ = 6 \cdot \frac{1}{2} \cdot \frac{\sqrt{3}}{2}r^2; \quad a = \frac{6p^2}{3} \cdot \frac{1}{2} \cdot \frac{\sqrt{3}}{2} = \frac{\sqrt{3}}{2}p^2.$$

$$\text{And } p^2 = \frac{2}{\sqrt{3}}a = \frac{2}{3^{\frac{1}{2}}}a:$$

$$\text{taking the square root of both sides, } p = \frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}}a^{\frac{1}{2}} = \left(\frac{4}{3}\right)^{\frac{1}{4}}a^{\frac{1}{2}}.$$

‘ Thus, putting $\frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}} = \left(\frac{4}{3}\right)^{\frac{1}{4}} = c$, which is a *constant*, and is equal to the square root of 2 divided by the fourth root of 3, or to the fourth root of 4 divided by the fourth root of 3, the formula is reduced to the simplest form:— $p = ca^{\frac{1}{2}} = \text{proximity when areality } (a) \text{ is given; and } a = \left(\frac{p}{c}\right) = \text{areality when } p \text{ is given.}$

‘ Thus the proximities vary as the square roots of the arealities; the arealities as the squares of the proximities; precisely as the areas of circles vary as the squares of their radii.

‘ By logarithms—

$$\lambda c = \frac{\lambda 4 - \lambda 3}{4} = .0312347$$

$$\text{and } c = 1.07457$$

$$\lambda p = \frac{\lambda a}{2} + \lambda c$$

$$\lambda a = 2(\lambda p - \lambda c).$$

‘ To determine the proximity of houses on the hypothesis that they are all distributed evenly over the surface of the country, the house areality is deduced by dividing by the number of houses the area expressed in square units.

‘ Let the *house-areality* be expressed by a' , and if there are 5 persons to a house, as

$$a = \frac{A}{P} \text{ and } P = 5H; \text{ then } a' = 5a.$$

‘ The proximity of the houses (p') is thus determined from the proximity of the population by substituting a' for a in the previous formula.

$$\text{And } p' = a'^{\frac{1}{2}}c = (5a)^{\frac{1}{2}}c = 5^{\frac{1}{2}}a^{\frac{1}{2}}c = 5^{\frac{1}{2}}p.$$

‘ And generally, to obtain the proximity of houses from the proximity of population (p), multiply the latter by the square root of the mean number of persons to a house—say $n \therefore n^{\frac{1}{2}}p = p'$.

‘ W. FARR.’

“ The following independent and original demonstration of the truth of the formula the Statistical Superintendent owes to the kindness of Professor Tait. In regard to this demonstration it is right to explain, that it was communicated before Professor Tait was made aware of the process followed by Dr. Farr in establishing the formula :—

‘ Taking a hexagonal distribution, let $n + 1$ be the number of points on each side (including both ends), then

$$\text{Whole number of points} = 1 + 6 \frac{n \overline{n+1}}{1 \cdot 2}.$$

‘ But those at the corners (6) belong each to only two triangles *in* the hexagon and to four external ones. They count therefore only as $\frac{2}{6} \times 6$.

Those on the sides but not at corners ($6(n-1)$) belong to as many outer as inner triangles, and therefore count only as $3(n-1)$. Hence, subtracting $3(n-1)$ and $\frac{4}{6} \times 6$ from the above number, we have

$$\text{Virtual number of points} = 1 + 3n \overline{n+1} - 3n - 1 - 4 = 3n^2.$$

‘ Also, the number of triangles in the hexagon is evidently $6n^2$.

$$\text{Thus, } \frac{\text{No. of points}}{\text{No. of triangles}} = \frac{3n^2}{6n^2} = \frac{1}{2}.$$

‘ But the area of one triangle, if l be the length of side, is $\frac{l^2}{4} \sqrt{3}$.

$$\text{Thus, } \frac{\text{No. of points}}{\text{Area of hexagon}} = \frac{1}{l^2 \frac{\sqrt{3}}{2}}.$$

This is the reciprocal of the ‘ mean area to each person,’ what Farr calls a .

$$\text{Hence } a = l^2 \frac{\sqrt{3}}{2}, \text{ or } l = \frac{2^{\frac{1}{2}}}{3^{\frac{1}{4}}} a^{\frac{1}{2}}.$$

‘ Hence it appears that l is what Farr calls p or proximity.

‘ This method is rigorous even when $n = 1$, so that it applies to any form of area.’

In an additional note Professor Tait writes :—

‘ Still better, and I don’t think to be farther improved.

‘ Take *one* equilateral triangle. Its three corners count each for $\frac{1}{3}$ th only, *being common to other five triangles*.

‘ Hence $\frac{\text{points}}{\text{triangles}} = \frac{\frac{1}{6} \cdot 3}{1} = \frac{1}{2}$, and the same holds good for any number of such triangles grouped together.’”

DENSITY OR PROXIMITY OF POPULATION: ITS ADVANTAGES AND DISADVANTAGES.

Dr. Chervin, in a periodical of great merit,* points out the fact that Carey, Schaeffle, and Herbert Spencer have not succeeded in applying statistics to their theory of sociology. In our social science we were more fortunate. It is true that in many branches of social science we have to forego the use of analysis; but to others analysis has been successfully applied. I propose to illustrate one of these applications.

The population is distributed over the face of the earth in town and country; and I will consider here some of the advantages and disadvantages of the two kinds of distribution. To do this we must, for mathematical purposes, use terms more precise than town and country: and density—usually of population—has been the term employed. For instance, the density of population in England (1861-70) was 367 persons to a square mile. This implies that England is divided into 58,311 square miles; and that on each square mile there are 367 persons. The density of population on every square mile is different, but taken in the aggregate this is the mean density.

We can conceive the mean population of England in 1861-71 (21,389,245) distributed over 37,319,221 acres, or one person to every 1.74 acres. Thus, imagine the population distributed in the centre of circles—or rather hexagons—of the area of 1.74 acres; then every person must be a certain number of yards from his neighbour: this distance I propose to call the proximity. The proximity of the people of England—their nearness to each other—is now (in 1876) 93 yards.

The advantage of residence in towns—of proximity of people to each other—is evident. Man is a sociable animal; and naturally in his workshop meets his fellow-man. It is, perhaps, impossible to enumerate all the ways in which men derive pleasure or benefits from frequent intercourse with each other; but it is possible to determine the sum of their gratifications by an economical test. What do they give per acre for the ground on which they live in country and town? You will find as from the country you approach the centre of the town the value of the land increases; thus it is 25*l.*, 50*l.*, 100*l.*, 200*l.*, 400*l.*, 800*l.*, 1600*l.* per acre. Now, on what score are these additional sums demanded or given? Is it not that men derive advantages from living near to each other?

There are countervailing disadvantages to which I shall now invite your attention. The first disadvantage strikes every one that comes from the country; and is embodied in Cowper's line—

“ God made the country, and man made the town.”

In the country you are surrounded by fields, by trees—in hill or vale; there the breezes coming from sea, shore, or mountain have free play. The atmosphere is redolent of ozone. In the town, this is wanting. Angus Smith, by chemical tests, proves the air is different. You know that nitrogen and oxygen are everywhere nearly the same in proportion; but carbonic acid varies with the density of population, and there are exhalations—smokes—of various kinds from dead matter, as well as from living bodies. Every town has an atmosphere of its own. Nay, every street has its own peculiar atmosphere. I was going to say that every living being has its own atmosphere.

Now, this atmosphere becomes in certain proportions deleterious, and I will proceed to show that as the population becomes more dense—within certain limits—this deleteriousness is expressed by the mortality. For example, if we arrange the 619 districts of England and Wales in groups according to the rates of mortality, we find that the 18 groups follow this

* *Annales de Démographie Internationale*, No. 5. Article.—*Sociologie et Statistique*, pp. 75-96.

law ; the rate of mortality increases as the density of population increases.* Thus at one end of the scale the deaths per 1000 of population are 15, 16, 17 ; at the other end of the scale, 31, 33, and 39 ; the acres to a person in the corresponding districts are 12, 4, and 3 ; and .01, .05, and .01. The intermediate rates of mortality are 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, and 29 ; the acres to a person are 4.0, 3.3, 2.9, 2.1, 1.1, 1.0, 0.5, 0.2 and .02.

Now, excluding the London districts, about which there is some difficulty, we have seven groups of districts where the mortality ranges thus : 17, 19, 22, 25, 28, 32, and 39. In the same districts the numbers of persons to a square mile are—166, 186, 379, 1718, 4499, 12,357, and 65,823. Thus in Liverpool, the densest and the unhealthiest district in England, there were 65,823 persons to a square mile ; of whom 39 per 1000 died annually. This series of facts may be put in a different way : the nearer, people live to each other the shorter their lives are. Thus, the proximity of people in 53 districts is 147 yards, the mean duration of life is 51 years ; in 345 districts the proximity is 139 yards, and the mean duration of life is 45 years ; in 137 districts the proximity is 97 yards and the mean duration of life is 40 years ; in 47 districts the proximity is 46 yards, and the mean duration of life is 35 years ; in 9 districts the proximity is 28 yards, and the mean duration of life is 32 years ; in Manchester district the proximity is 17 yards, and the mean duration of life is 29 years ; in Liverpool district the proximity is 7 yards, and the mean duration of life is 26 years.†

This is a determined law ; and the duration of life being given in one set of conditions, the duration of life in another set of conditions is determined from the proximities.

$$e' = e \left(\frac{p'}{p} \right)^{.23996} ; \quad 35 = 45 \left(\frac{46}{139} \right)^{.24}$$

applied to the districts where the mean lifetime is 45 and the proximity 139 yards enables us to determine the lifetime where the proximity is 46 yards.

We will now draw some inferences from this law : that proximity and shortness of life go together.

(1.) The question is of the highest importance to England. Every town is surrounded by circles of new houses ; and at every census villages are found grown into new towns. Thus, in the last three censuses, the town population was set down at 8,990,809, 10,960,998, and 14,041,404 ; and to England and Wales 2,000,000 of people have probably been added since the census of 1871, the greater part of whom will be found in the towns.

Now, according to our law, this should imply an increase of mortality ; and no doubt such an increase would have been observed, had there not been a countervailing law in operation.

(2.) The mortality was at the annual rate per 1000 in the last three decennials of 22.36 in 1841-50, 22.24 in 1851-60, and 22.51 in 1861-70. In the last seven years, 1871-7, the mortality was at the rate of 21.64, or .87 per 1000 less than in the ten years last quoted. Thus we may hope that there is a reduced mortality in the last seven years ; and that thus about 20,000 lives are saved annually.

(3.) While the population has increased, the atmosphere has become purer ; and this should encourage us to persevere in our efforts in the same direction.

* The mortality and the density are for the ten years 1861-1870. See Supplement to Registrar-General's 35th Report, p. cli. to clxii.

† It has been found that the mean duration of life of a people (by the English and other Life Tables) is nearly equivalent to the reciprocal of the death-rate *minus* one-third of the difference between the reciprocal of the death-rate and that of the birth-rate ; and the above values were determined in this way. Thus the birth-rate in the group of 53 districts was .03022 and the death-rate .01675 ; so

$$\frac{1}{.01675} - \frac{1}{3} \left(\frac{1}{.01675} - \frac{1}{.03022} \right) = 59.7 - \frac{1}{3} (59.7 - 33.0) = 51.$$

(4.) The law of proximity would lead us to lay down some standard, and to fix some invariable rule, that beyond a certain density, no further houses should be built on the town areas. Thus, in 23 towns of the United Kingdom, there are 38 persons to an acre; and if such was the standard, where would Liverpool be with its 102 persons to an acre; where would Glasgow be with its 94 persons; Manchester with its 84 persons; Edinburgh and Plymouth with their 53 persons to an acre?

(5.) It is certain that the most effective means of reducing the mortality is to thin the dwellings in the dense parts of the towns; to abolish under Mr. Cross's Act, all the rookeries, and not to rebuild them.

(6.) Simultaneously to put a stop to much of the smoke, and to the sewage gases which are poured into the air the population breathes.

(7.) The law might enact for the future that squares and parks should be left in the area of every town; as these spaces are indispensably required for the health of the population.

(8.) And for the present time the whole of the available land should not be built over, but spaces be appropriated for parks wherever they can be procured. Miss Vernon's paper in the transactions of the Social Science Association will throw much interesting light upon this subject.

(See Diagram on opposite page.)

TABLE A.—PROXIMITY OF POPULATION.

Five hundred and ninety-three districts of England and Wales are arranged in seven groups in the order of mortality. The districts of London are excluded.

				Proximity of the Population (in yards).	Number of living out of which one will die annually.	Mean duration of Life.
Liverpool	-	-	-	7	26	26

Sweden	339·51	371·30	10·017
Austria	126·78	138·65	71·839
Hungary (1875)	154·72	169·21	48·240
Prussia	124·30	135·94	74·738
German Empire	120·29	131·55	79·793
Belgium	79·84	87·32	181·163
Netherlands	99·25	108·54	117·236
France	128·76	140·82	69·652
Spain (1870)	186·06	203·48	33·357
Italy	111·00	121·39	93·714

The Populations used for the above Table are taken from the Registrar-General's 39th Report. With the exception of Hungary and Spain they are for the year 1876 (estimated or enumerated).

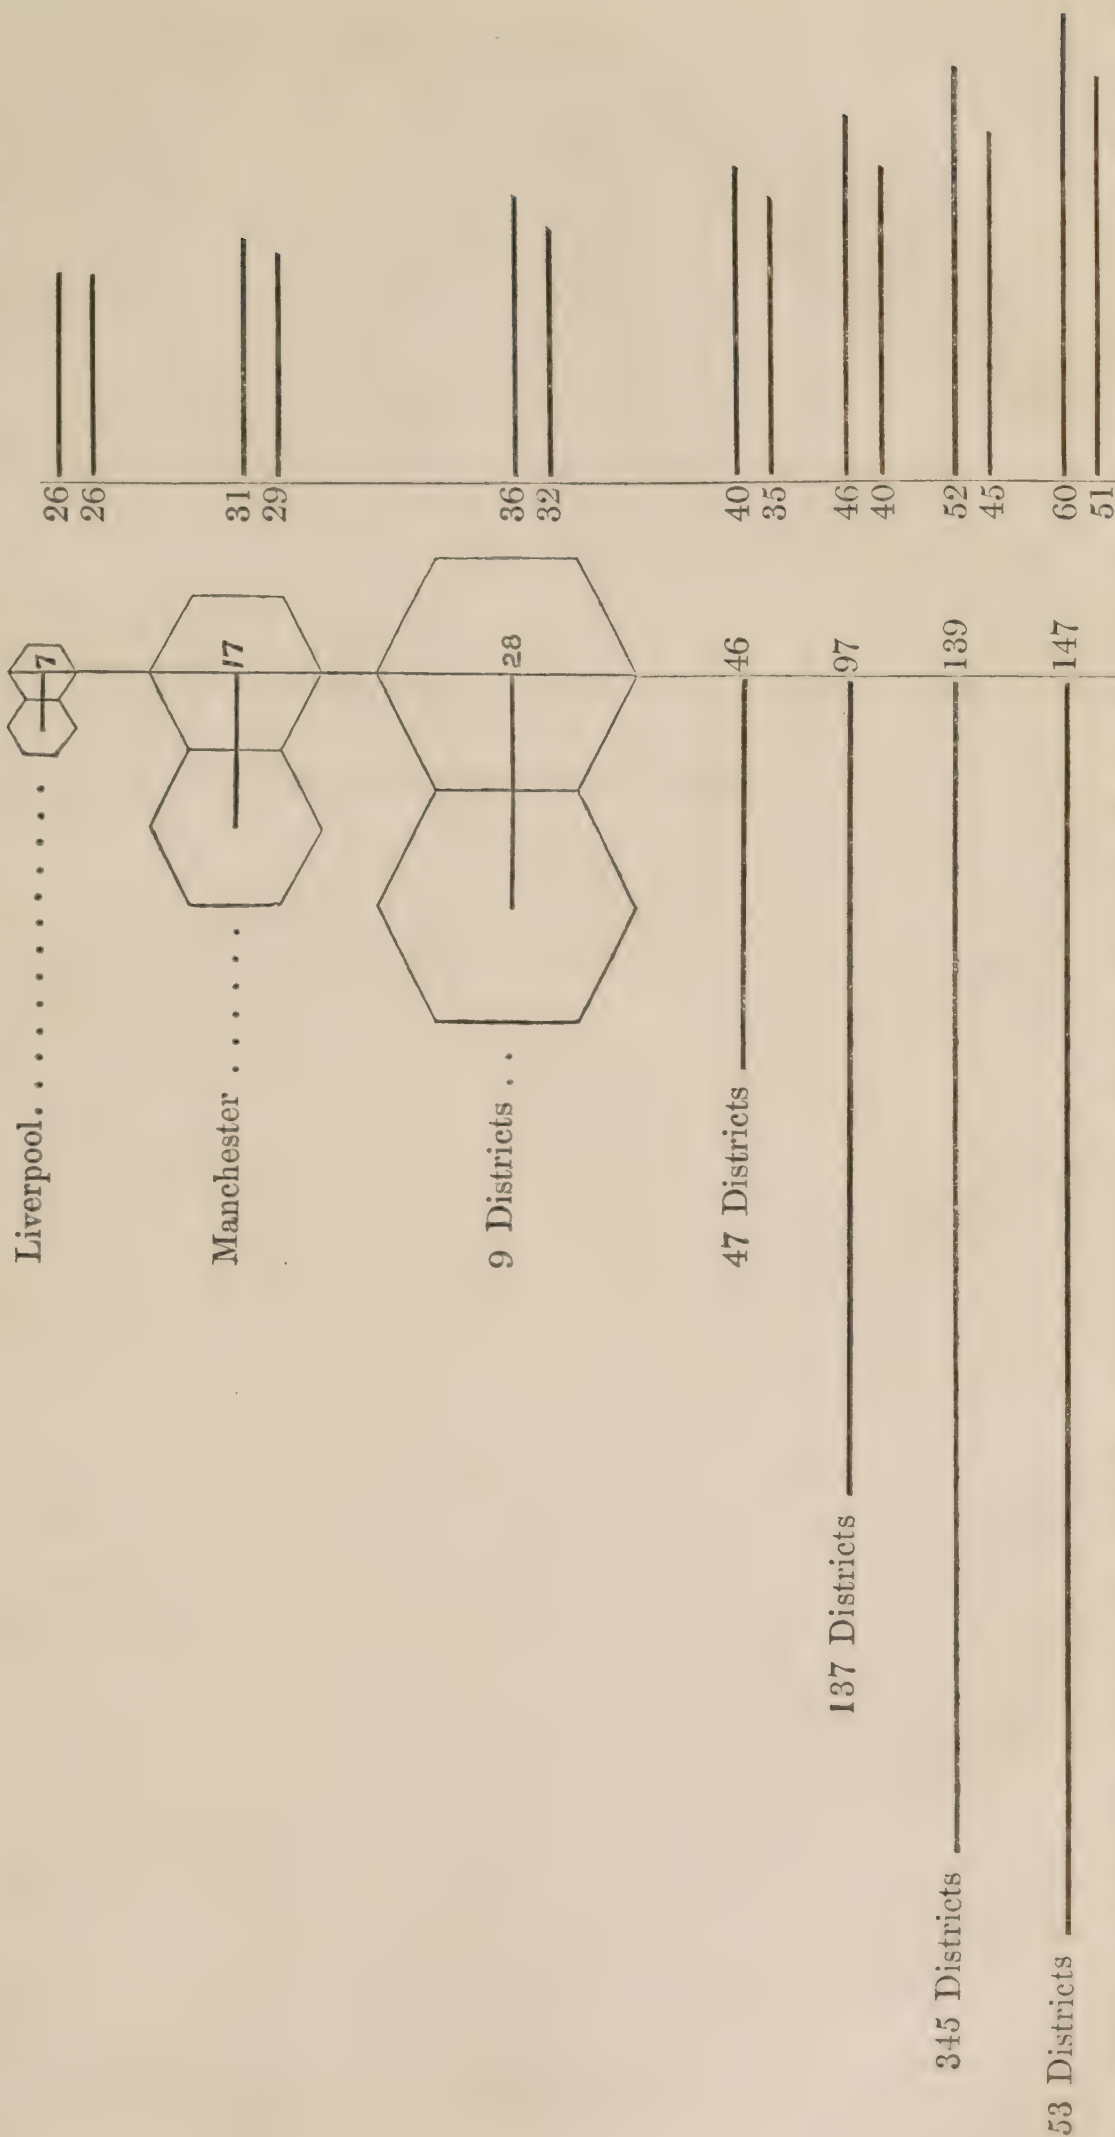

The areas were obtained from the Almanach de Gotha.

FORMULA.

$$p = \left(\frac{4}{3}\right)^{\frac{1}{3}} a, \text{ where } p = \text{Proximity, and } a = \text{Area to each Person. } \left(\log.\left(\frac{4}{3}\right)^{\frac{1}{3}} = .0312347\right)$$

Number of living, out of which one
will die annually (long line).
Mean duration of life (short line).

Proximity
of the Population
(in yards).

NOTE.—Given the mean duration of life (e) in an area with a stated proximity (p), the mean duration of life (e') in another area with a different proximity (p') can be calculated approximately by the formula $e' = e \left(\frac{p'}{p}\right)^{.24}$.

TABLE C.—FOREIGN TOWNS.

TOWN.	Date at which the Population is taken.	Proximity of the People in metres.	TOWN.	Date at which the Population is taken.	Proximity of the People in metres.

PRESENT PROVISION OF PARKS IN THE GREAT TOWNS.

To show the present provision of parks in the great towns of the country, queries were addressed to the authorities, and replies, of which the following is a digest, have been furnished by Edward Hornsby, Esq., Secretary, Board of Public Works, Dublin; by Joseph Rayner, Esq., Town Clerk, Liverpool; by Dr. Robertson, M.D., F.R.S.E., Edinburgh; by William Price, Esq., Town Clerk, Bristol; by Dr. Russell, M.D., Medical Officer of Health, Glasgow; by J. A. Freeman, Esq., Town Clerk, Brighton; by J. E. Wakefield, Esq., Clerk of the Metropolitan Board of Works, Spring Gardens, London; by W. T. McGowen, Esq., Town Clerk, Bradford; by W. H. Talbot, Esq., Deputy Town Clerk, Manchester; by E. J. Hayes, Esq., Town Clerk, Birmingham; by C. C. Whiteford, Esq., Town Clerk, Plymouth; by G. W. Morrison, Esq., Town Clerk, Leeds; by J. Storey, Esq., Town Clerk, Leicester; by S. G. Johnson, Esq., Town Clerk, Nottingham; by C. Moorhouse, Esq., Town Clerk, Salford; by H. Booth, Esq., Town Clerk, Oldham; by W. Snowball, Esq., Town Clerk, Sunderland; by C. S. Todd, Esq., Town Clerk, Hull; by R. P. Philipson, Esq., Town Clerk, Newcastle-on-Tyne; by J. Yeomans, Esq., Town Clerk, Sheffield; by J. Howard, Esq., Town Clerk, Portsmouth; by H. B. Miller, Esq., Town Clerk, Norwich; and by H. Underhill, Esq., Town Clerk, Wolverhampton.

DUBLIN contains 10,050 acres, and an estimated population in 1879 of 314,666; it has one public park, viz., Phoenix Park, with an area of 1753 acres, the Glasnevin Botanic Gardens covering an area of nearly 40 acres, and a lawn of 3 acres belonging to Leinster House, to which the public are admitted. The annual cost of maintenance of the park, which is situated to the west, and in the immediate vicinity of the city, is 6768*l.*, that of the Botanic Gardens, *excluding* the pay of officials and workmen, which is defrayed by the Science and Art Department, is 986*l.* In addition to the park and gardens, there is an open space of about 40 acres, known as St. Stephen's Green, which is now being ornamented at the expense of Sir A. Guinness, Bart., M.P., and will, when completed, be opened as a public park. It will be vested in the Commissioners of Public Works and maintained as a public park from 1st July 1879, at an annual estimated cost of 1,400*l.*

EDINBURGH contains an area of 4191 acres, and an estimated population in 1879 of 226,075; it has one royal park, viz., Queen's Park, containing 407 acres, and about 145 acres of park and meadow ground which belong to the city. Music is occasionally performed by military bands. The parks are frequented by all classes of the population. Queen's Park is situated about half a mile to the east of the centre of the city; the other park is about a quarter of a mile to the south, and the meadow ground is nearly a mile to the north-west of the centre of the city.

BRISTOL, containing an area of 4452 acres, and an estimated population in 1879 of 209,947, has two downs or commons covering an area of 442 acres. They are thickly planted with thorn and other bushes and contain many fine timber trees, but nothing of an ornamental style, the prevailing idea being to preserve the down or common character, and avoid that of a garden. Clifton Down was settled without any payment, subject to certain commonable rights; and the Corporation purchased Durdham Down, subject to such rights for 15,000*l.* The cost of maintaining these two downs is between 500*l.* and 600*l.* a year. The property in the neighbourhood is said, undoubtedly, to have increased in value, both on account of the many advantages the downs afford, and the certainty that they will always remain open and unenclosed. In the summer months music is constantly per-

formed by itinerant bands, and others partly supported by the inhabitants. The downs are frequented by all classes of the population, and form one of the chief attractions to Clifton as a health resort. They lie in a north-westerly direction and within two miles from the centre of the city.

LIVERPOOL, containing an area of 5210 acres, and an estimated population in 1879 of 538,338, has four parks covering an area of 525 acres. They are planted and ornamented. The original cost of two of the parks including the building land was 573,382*l.*, but the cost of the other two cannot be obtained, as they were formed out of the Corporate Estate, and not purchased separately for this specific purpose. The annual cost of maintenance of the four parks is about 8050*l.* Music is generally performed by the band of the Liverpool police force, and by the bands of various volunteer corps. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. The parks are situated south-east, north-east, and east, at an average distance of about one mile and a quarter from the centre of the town.

GLASGOW contains 6033 acres, and an estimated population in 1879 of 578,156; it has four parks covering an area of 447 acres, about one-fourth of which is planted with trees, shrubs, and flowers. The parks were purchased by the Town Council of Glasgow as trustees under "The Glasgow Public Parks Act, 1859," and "The Glasgow Improvement Act, 1866," at a cost, including expense of formation, of 310,000*l.* The annual cost of maintenance of the parks, (together with 9000*l.* interest,) amounts to 19,250*l.* The property in the neighbourhood is said to have increased considerably in value since their formation. Music is performed at the cost of the Corporation, by military bands three nights in the week during the summer in each of the parks, which are frequented by all classes of the population, especially the working classes. It is believed that the parks have contributed to the health of the neighbourhood. They are situated between one and two miles from the centre of the town, in easterly, westerly, and southerly directions.

BRIGHTON, containing an area of 2354 acres, and an estimated population in 1879 of 105,608, has no parks, but two recreation grounds, viz., the Level, and the Race Ground, covering an area of about 106 acres, the outer pathways of which are planted with trees and shrubs. They were dedicated to the public use by the Lords of the Manor and their tenants on a division of certain lands in the borough known as the tenantry lands. The cost of maintenance of the Level, which contains a little over 10 acres, is about 100*l.* a year. The Race Ground is vested in trustees, and no outlay is made upon it. The grounds are chiefly frequented by the working classes and their children, and, it is believed, have contributed to the health of the neighbourhood. The Level is situated in the centre of the town, and the Race Ground at the north-east corner.

LONDON, having an area of 75,362 acres, and an estimated population in 1879 of 3,620,868 is provided with nine royal parks, containing 1790 acres, all of which are planted and ornamented. The cost of maintaining the parks is stated to be about 74,553*l.* annually. It has also two people's parks and several commons and open spaces, covering an area of about 1459 acres, under the management of the Board of Works, who are negotiating for the acquirement of other open spaces near the metropolis. Excluding Plumstead and Welling Commons, the Board of Works have expended about 346,033*l.* in the purchase, formation, and improvement of the two people's parks, commons, and open spaces, which cost annually about 7390*l.* for maintenance. The Board also paid 20,450*l.* for a part of Victoria Park, which the Government were about to devote to building purposes. The parks, in nearly all of which music is performed frequently during the summer months, are frequented by all classes of

the population, and without doubt exercise a very beneficial influence over the people in many ways. They are situated in all directions around the metropolis.

"It may perhaps be assumed that London, with her royal as well as her people's parks, is better provided with open spaces than provincial towns. The Thames is certainly a great air artery and a source of never-ending enjoyment to the Londoner; but for recreation ground we have but an acre for 1114 persons (less than several provincial towns), and there are very few neighbourhoods where there is any land that it is possible to convert into another park. In Paddington, however, there is still time to save nearly 100 acres from the builder. The land is adjacent to Kilburn and Maida Vale, and is surrounded on all sides by an ever-increasing population which is practically out of reach of any park or recreation ground.

"At this moment a petition, signed by 18,000 persons, is about to be presented to the Board of Works from Paddington and the adjoining parishes, praying the Board to secure this land, the remainder unbuilt over of the so-called Paddington Estate. The ground is now surrounded, within a radius of a mile, by nearly 100,000 people; whole districts in Kilburn and Queen's Park Estate being inhabited exclusively by the artisan class, far removed from amusements of all sorts, indoor or outdoor. It would be particularly appropriate that the Paddington Estate should be restored to public uses, forming as it does part of the lands left long ago to the parishioners of Paddington."*

LEICESTER, containing an area of about 3200 acres, and an estimated population in 1879 of 125,622, has about 65 acres of park land for the recreation of the people; it consists of good open grass land, but is not planted or ornamented. The original cost is not known, and the annual outlay for maintenance is more than covered by the adjistment of sheep. The property in the neighbourhood of the park is said to have increased in value. Music is performed one evening in a week during the summer by a private subscription band. The park is frequented by all classes of the population, and, it is believed, has contributed to the health of the neighbourhood. It is situated about a mile in a south-easterly direction from the centre of the town.

Leicester also has two public recreation grounds, one on the southern side of the town containing 9 acres, and the other on the eastern side, containing about 26 acres, each about three quarters of a mile from the centre of the town. The Corporation have recently purchased about 60 acres of land on the north-western side of the town (three-quarters of a mile from its centre), and intend planting and ornamenting it at a total cost, including purchase, of 30,000*l.*

BRADFORD, containing about 7220 acres, and an estimated population in 1879 of 191,046, has four parks, one of which is not quite complete, covering an area of 215 acres. They are all planted and ornamented in a most liberal manner. The original cost is stated to be about 169,804*l.* One park valued at 40,000*l.*, was established by a public committee, and handed over to the Corporation free of cost, the other three being purchased by the Corporation. Thirty acres of land have also been acquired for the formation of a fifth park, which when complete will cost the Corporation about 20,000*l.* The annual cost of maintenance at present is about 2000*l.*, but will be increased as Bowling and Bradford Moor Parks are completed. The property in the neighbourhood of the parks has increased very considerably in value; land which was formerly used for pasture has been extensively taken up for building sites, and instead of being sold by the *acre* it is now sold by the *yard*. Music is performed in the parks on appointed afternoons throughout the summer months, by bands

* See Miss M. J. Vernon's paper on "Public Parks and Gardens," read at the Social Science Congress, Cheltenham, Oct. 1878.

supported by subscribers, and sums voluntarily contributed. The parks are frequented by all classes of the population (especially by the industrial classes), and, it is believed, have contributed much to the health of the neighbourhood, and exercise beneficial influences on the visitors. The parks are situated on all sides of the town, in the most open and healthful spots that could be selected, such as are already, or are fast becoming, centres of population, in order that they may be available without requiring the inhabitants to walk far to get to them.

MANCHESTER, containing 4293 acres, and an estimated population in 1879 of 361,819, has three parks, covering an area of about 121 acres, all of which are planted and ornamented. Two of the parks were purchased by public subscription, and cost about 14,963*l.*; the other was purchased and formed by the Corporation, at a cost of about 79,000*l.* In addition to the three parks there is an open space of about 5 acres known as Ardwick Green, which was presented to the city by the owners. The annual cost of maintenance is about 6000*l.* for the whole. The property in the neighbourhood of the parks has increased in value, particularly that adjoining the Alexandra Park, where, since its formation, many residences have been built. Music is performed by the police band, the expense of which is defrayed by private subscription. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. They are situated north-west, north-east, east, and south of the city, and between one and two miles from its centre.

BIRMINGHAM, containing an area of 8400 acres, and an estimated population in 1879 of 388,884, has seven public parks and two public recreation grounds. The area of the parks is about 211 acres, and that of the recreation grounds about 13 acres. They are all laid out and planted, and two of them have ornamental sheets of water. Four of the parks and one recreation ground were presented to the Corporation. The remainder cost the Corporation, in the purchase, planting, &c., about 58,000*l.* The cost of maintenance in the year 1877, exclusive of interest on loans and sinking funds, was 4227*l.* In the summer months music is performed in two of the parks by the police band. The parks are frequented by all classes of the population, and very largely by the working classes; and, it is believed, have contributed to the health of the neighbourhood; they are situated on all sides of the town and between one and two miles from the centre.

LEEDS contains an area of 21,572 acres, and an estimated population in 1879 of 311,860; it has one park and five recreation grounds. The recreation grounds cover an area of 108 acres. The Corporation expended a sum of about 151,487*l.* in the purchase of the park estate which contains 774 acres, and it is intended to retain 350 acres, which are planted and ornamented, for park purposes and to sell the remainder. The cost of four of the recreation grounds was about 13,367*l.*, the other being held by the Corporation at a rental of 140*l.* The annual cost of maintaining the park is about 3507*l.* and of the recreation grounds 111*l.* The park is situated about two miles and three quarters in a north-easterly direction from the centre of the town.

PLYMOUTH, containing an area of 1395 acres, and an estimated population in 1879 of 74,293, has parks or open spaces known as the Plymouth Hoe, the Governor's Meadow, and part of the Glacis of the Citadel; they contain altogether an area of about 22 acres; the Governor's Meadow only is planted with a border. The Hoe has been the property of the Corporation time out of mind; but the other two spaces are rented from the War Department for 30 years at 52*l.* per annum. The annual cost of maintenance is between 350*l.* and 400*l.* In the summer months music is performed by the bands of the Royal Marine corps and by those of the regiments stationed in Plymouth and Devonport. The parks are frequented by all classes of the population, and, it is believed, have contributed to the

health of the neighbourhood. They are situated about half a mile in a southerly direction from the centre of the town.

NOTTINGHAM, containing 9960 acres, and an estimated population in 1879 of 169,396, has 150 acres of parks and recreation grounds, about 40 acres of which are planted and laid out in an ornamental manner; the remainder consists of cricket and recreation grounds and public walks. Of the 150 acres about 120 were allotted to the Corporation by the Commissioners under the Nottingham Inclosure Act of 1845 for recreation purposes; the remainder is the private property of the Corporation. The property in the neighbourhood of the parks is considered to have increased in value. Music is occasionally performed in the evenings by the Nottingham police and other local bands. The parks and grounds, costing annually 2570*l.* for maintenance, are frequented by all classes of the population, but chiefly by the working classes, and, it is believed, have contributed to the health of the neighbourhood. They are situated in nearly all directions, and within a mile, from the centre of the town.

SALFORD, containing an area of 5170 acres, and an estimated population in 1879 of 177,849, has three parks covering an area of 70 acres, all of which are planted and ornamented with flower beds, mounds, and shrubberies. There is also, at the present time, another park, of about 17 acres, in course of construction. The amount expended by the Corporation in the purchase and formation of parks is 21,725*l.* One of them was, however, almost entirely acquired by public subscription and handed over to the Corporation for management. They cost about 4673*l.* per annum for maintenance. Music is performed in each of the parks during the summer months by the police band; and property in their neighbourhood is said to have increased in value. They are chiefly frequented by the working classes, and, it is believed, have contributed to the health of the neighbourhood. The sites have been so selected that each park is within easy reach of the most populous parts of the borough.

OLDHAM, containing 4666 acres, and an estimated population in 1879 of 111,318, has one park covering an area of 60 acres, which is planted and ornamented. It was purchased and planted by the Corporation at a cost of about 33,000*l.*, and the sum of about 1250*l.* is expended annually in its maintenance. The property in the neighbourhood of the park is said to have increased considerably in value. Music is occasionally performed by volunteer and other bands. The park is frequented by all classes of the population, and particularly by the working classes, and it is believed to have contributed much to the health of the neighbourhood. It is situated about a quarter of a mile in a southerly direction from the centre of the town. It is intended to secure 16 acres of land in another part of Oldham as recreation ground.

SUNDERLAND, containing an area of 2768 acres and an estimated population in 1879 of 114,575, has about 24 acres of park ground, planted and laid out with intersecting walks and an ornamental sheet of water. It was purchased and formed by the Corporation at a cost of 15,500*l.*, and about 700*l.*, exclusive of interest, &c., is expended annually in maintaining it. The property in its neighbourhood is said to have increased very considerably in value. Music is performed occasionally during the summer months by the police and other local bands. All classes of the inhabitants frequent the park, which is believed to have contributed to the health of the neighbourhood. It is situated as nearly as may be in the centre of the town.

HULL containing an area of 3635 acres, and an estimated population in 1879 of 146,347, has one park and two recreation grounds. The park contains 26 acres and the two recreation grounds nearly 5 acres. Only the park is planted and ornamented. The land for the park was presented, and the recreation grounds are leased to the Corporation. The park costs annually for maintenance about 450*l.*, and the recreation grounds 160*l.*; the property in the neighbourhood of the former is said to have increased

immensely in value. Music is performed by the police and other bands on stated days and hours. The park is frequented by all classes, and it is believed to have contributed to the health of the neighbourhood. It is situated about one mile from the centre of the town in a north-westerly direction.

NEWCASTLE-ON-TYNE contains 5371 acres, and an estimated population in 1879 of 146,948; it has one park covering an area of 35 acres planted and ornamented. It was obtained free of cost, the only expense being the formation. The annual cost of maintenance is about 650*l.* Music is performed weekly in the summer months by the police band, and the park is frequented by all classes of the population. The distance of the park from the centre of the town is about three quarters of a mile in a northerly direction. Owing to the success and the satisfaction given to the public by the park, the Corporation have purchased about 31 acres, and have been presented with 26 acres of land by Sir W. G. Armstrong, for the formation of two other parks, which it is thought will be opened in the spring of 1879. This additional outlay on the part of the Corporation will cost about 26,560*l.* in purchase money. One of these new parks is situated in the western and the other in the eastern part of the town.

SHEFFIELD containing an area of 19,651 acres, and an estimated population in 1879 of 297,138, has two parks covering an area of 49 acres, both of which are planted to a greater or a less extent. The original cost of Weston Park, containing 13 acres, was 17,500*l.*; it was purchased by the Corporation. The other park, containing 36 acres, was presented to the Corporation by Mr. Alderman Mark Firth, J.P. The annual cost of maintaining the two parks is about 1300*l.* Music is occasionally performed during the summer months by the volunteer and police bands. The parks are frequented by all classes of the population, and, it is believed, have contributed to the health of the neighbourhood. Weston Park is situated about one mile in a westerly direction and Firth Park about two miles and a half in a northerly direction from the centre of the town.

In addition to the two parks, there is one belonging to the Duke of Norfolk containing about 30 acres, to which the public are admitted. It is situated about one mile from the centre of the town in an easterly direction.

PORTSMOUTH, containing an area of 4486 acres, and an estimated population in 1879 of 131,821, has one park, opened in June last, the area of which is about 14 acres. It is planted, and adjoining is an additional space of about 2 acres, set apart exclusively for children, with swings and other amusements. The land is held for 50 years, under a lease from the War Department, at an annual rent of 50*l.* The cost of formation, lodges, &c. was 3500*l.* No arrangement as to the performance of music has yet been made, but the "Union" band plays in the afternoon and evening in the summer months. The park is chiefly frequented by the poorer classes, and is situated in the centre of the town.

Another piece of land of 17 acres, near the sea, has been acquired for a park which is now in course of formation.

NORWICH, containing an area of 7472 acres, and an estimated population in 1879 of 85,222, has no park, but there is a space of about 7 acres known as Chapel Field, which is surrounded with fine elm trees. The field has been in the possession of the Corporation for 600 years at least, and costs about 60*l.* or 70*l.* per annum for maintenance. It is chiefly frequented by the working classes and their children, and it is believed to have contributed to the health of the neighbourhood. It is situated about half a mile in a southerly direction from the centre of the city.

WOLVERHAMPTON, containing an area of 3396 acres, and an estimated population in 1879 of 75,100, has at the present time no public park for the recreation of the people. The town council have, however, just accepted a lease of 50 acres of land which they are about forming into a public park. It will be situated almost in the centre of the borough, and will probably be opened in about a year.

COMPARATIVE ANALYSIS OF PARK PROVISION IN THE TOWNS.

An attempt is made in the following table to show how the principal towns of England are relatively provided with parks. Thus, in the 22 towns there is one acre of park area to 25 acres of town area; and there are 965 inhabitants to one acre of park area. In Dublin there are six acres of town area to one acre of park area; and there are 175 inhabitants to one acre of park area; in London there are 23 acres of town area to one acre of park area, and there are 1114 inhabitants to one acre of park area; there are 47 acres of town area to one acre of park area in Leeds, and 681 inhabitants to one acre of park area.

ACRES of TOWN AREA to ONE of PARK; PERSONS to ONE ACRE of PARK, and to ONE ACRE of TOWN AREA; and the NUMBER and PROPORTION of OUTSIDE HOUSES.

NAME OF TOWN.	Acres of Town Area to One Acre of Park.	Persons		Outside Houses.

Norwich - - - -	1067	12175	11	537	·02933
Wolverhampton (no Parks)	—	—	22	456	·03448

A = Town area; P = Park area; I = Inhabitants; H^2 = Total Houses; H = Houses on side of a square; $\frac{A}{P}$ = Town area to Park area; $\frac{I}{P}$ = Inhabitants to Park area; $4(H-1)$ = Outside Houses; $\frac{4(H-1)}{H^2}$ = proportional number of Outside Houses to the total.

NOTE.—The Table may be read thus : In London there are 23 acres of town area to one acre of park, 1114 persons to one acre of park, 48 persons to one acre of town; the number of outside houses is 2581, and the proportional number to total houses ·00618. In Plymouth there are 63 acres of town area to one acre of park, 3377 persons to one acre of park, 53 persons to one acre of town; the number of outside houses is 338, and the proportional number to total houses ·04631.

It must be evident that there is another element that has to be taken into account; that is the size of the town compared with its circumference. For a town is supplied with air from without as well as from within; and generally the number of houses in the circumference of a town is greater in proportion in the small than in the large towns. Thus, suppose the houses to be symmetrically arranged in a square round the centre of a town, then a single house is surrounded on every side with air. If the square has five houses to a side then the houses will be 25, and the outside houses will be 16;

1	2	3	4	5
16				6
15				7
14				8
13	12	11	10	9

with six houses to a side there will be 36 houses and 20 outside houses; with 100 houses to the side there will be 10,000 and 396 outside houses. The degrees of the supplies of outside air will be expressed by the fractions

$\frac{16}{25}, \frac{20}{36}, \frac{396}{10,000}$. The general formula will be $\frac{4(H-1)}{H^2} = h$.

Then a correction will be required in comparing towns of different sizes. Thus the population of Birmingham is 388,884 and the population of London is 3,620,868. The houses in Birmingham are 68,532, the houses in London are 417,767. Supposing the houses to be arranged symmetrically in squares in both towns the outside houses will be 1043 in Birmingham and 2581 in London. The proportion of air supplied from outside to Birmingham will be to that supplied from outside houses in London, as $\frac{1043}{68532}$ to $\frac{2581}{417767}$ or as .01522 to .00618.

The houses are not arranged symmetrically in squares, but the numbers given are *minima*, for any irregularity in contour would increase the number of outside houses to the total number of houses.

I have the honour to be,

Sir,

Your very obedient servant,

To
The Registrar General.

WILLIAM FARR.

APPENDIX TABLES,
1877.

NOTE.—For the causes of death in the 5 years 1833–42, and the 3 years 1847–8–9, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1843–46.
* Deaths from violence were not classified according to orders prior to 1858. All deaths from violence are classified to Order I. (Accident or Negligence), unless they are specially ascribed to homicide, suicide, or execution. Order 2, comprising violent deaths in battle, is inapplicable to the civil population.
† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in the “Criminal Returns,” inasmuch as the executions therein recorded in each year are classed according to the dates of conviction, while the numbers in this Table are placed under the years in which the deaths are registered.

in each of the 28 Years 1850-1877.

* From 1847 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to establish something like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions which the separate numbers bore to the sum of the two in subsequent years, when they were separately classified.

† See note referring to classification of deaths from violence on page 248.

in England in each of the 28 Years 1850-1877.

* See note referring to the classification of deaths from violence on page 248.

NOTE.—The cause of 1,826 deaths were ill defined or not specified: the figures in this Table represent therefore the proportional deaths from each cause to a million deaths from specified causes.

TABLE 4.*—Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 25 Years 1850-74, and in each Quinquenniad of that Period; also the Rate of Mortality in the Years 1875, 1876, and 1877.

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 25 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1858 these have been distributed rateably over all the specified causes in the Table.

† See note referring to the classification of deaths from violence on page 248.

‡ Average in 10 years.

TABLE 4.* (continued.) **Mean Annual Rate of Mortality in England from each CLASS of CAUSES and from each CAUSE of DEATH during the 25 Years 1850-74, and in each Quinquenniad of that Period; also the Rate of Mortality in the Years 1875, 1876, and 1877.**

* The populations of these counties have been estimated to the middle of 1877 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1877. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

	Hydatids - - - - -	51	27	24					

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.]

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 289) and "Index of certain Towns" (page 299).

A

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.
Alresford, 104.
Alston, 565.
Alton, 105.
Altrincham, 447.
Alverstokey, 88.
Amersham, 139.
Amesbury, 253.
Amptill, 172.
Andover, 109.
Anglesey, 627.
Ashborne, 440.
Ashby-de-la-Zouch, 407.
Ashton-under-Lyne, 468.
Aston, 388.
Atcham (Shrewsbury) 351.
Atherstone, 390.
Auckland, 543.
Axbridge, 315.
Axminster, 269.
Aylesbury, 142.
Aylsham, 223.
Aysgarth, 537.

B

Bakewell, 442.
Bala, 620.
Banbury, 154.
Bangor, 625.
Barnet, 127.
Barnsley, 505.
Barnstaple, 285.
Barrow-in-Furness, 481a.
Barrow-upon-Soar, 409.
Barton Regis, 321.
Barton-upon-Irwell, 464.
Basford, 431.
Basingstoke, 107.
Bath, 317.
Battle, 68.
Beaminster, 267.
Bedale, 535.

Bedford, 170.
Bedminster, 319.
Bedwelty, 580.
Belford, 561.
Bellingham, 558.
Belper, 439.
Berkhampstead, 138.
Berwick, 562.
Bethnal Green, 15.
Beverley, 518.
Bicester, 150.
Bideford, 287.
Biggleswade, 171.
Billericay, 190.
Billesdon, 403.
Bingham, 436.
Birkenhead, 454.
Birmingham, 387.
Bishop Stortford, 130.
Blaby, 404.
Blackburn, 474.
Blandford, 260.
Blean, 57.
Blofield, 228.
Blything, 216.
Bodmin, 294.
Bolton, 462.
Bootle, 573.
Bosmere, 211.
Boston, 418.
Bourn, 415.
Brackley, 155.
Bradfield, 117.
Bradford-on-Avon, 249.
Bradford (Yorkshire), 496.
Braintree, 199.
Bramley, 499.
Brampton, 567.
Brecknock, 604.
Brentford, 125.
Bridge, 55.
Bridgend, 586.
Bridgnorth, 348.
Bridgwater, 307.
Bridlington, 524.
Bridport, 268.
Brighton, 76.
Bristol, 320.
Brixworth, 161.
Bromley, 40.

Bromsgrove, 385.
Bromyard, 341.
Buckingham, 145.
Builth, 603.
Burnley, 472.
Burton-upon-Trent, 368.
Bury, 463.
Bury St. Edmunds, 206.

C

Caistor, 425.
Calne, 245.
Camberwell, 25.
Cambridge, 178.
Camelford, 290.
Cannock, 371.
Canterbury, 56.
Cardiff, 583.
Cardigan, 597.
Carlisle, 569.
Carmarthen, 593.
Carnarvon, 624.
Castle Ward, 555.
Catherington, 102.
Caxton, 176.
Chapel-en-le-Frith, 443.
Chard, 309.
Cheadle, 366.
Chelmsford, 191.
Chelsea, 2.
Cheltenham, 335.
Chepstow, 577.
Chertsey, 30.
Chester, 452.
Chesterfield, 441.
Chester-le-Street, 549.
Chesterton, 177.
Chichester, 83.
Chippenham, 244.
Chipping Norton, 153.
Chipping Sodbury, 322.
Chorley, 475.
Chorlton, 465.
Christchurch, 92.
Church Stretton, 346.
Cirencester, 331.
Clebury Mortimer, 347.
Clitheroe, 473.

* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring to the "*Abstract of Marriages*," District number 600 (see page 24); and the numbers of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the respective Tables.

Clun, 345.
 Clutton, 316.
 Cokermonth, 571.
 Colchester, 195.
 Congleton, 450.
 Conway, 626.
 Cookham, 120.
 Corwen, 619.
 Cosford, 204.
 Coventry, 393.
 Cranbrook, 51.
 Crediton, 282.
 Crickhowell, 605.
 Cricklade, 242.
 Croydon, 37.
 Cuckfield, 74.

INDEX OF SUB-DISTRICTS.

This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
A			Ardleigh . . .	Tendring . . .	194; 5	Barton . . .	Glanford Brigg	426; 3

APPENDIX TABLES	247-283
AREA in Statute Acres of each Division, County, District, and Sub-district .	30-84
in Acres and Hectares of the United Kingdom. (Table 52.—Prel.)	xcv
of the Islands in the British Seas. (Table 54.—Prel.) . . .	xcvi
ARMY: Strength and Mortality of the Army at Home and Abroad. (Tables 58-65, pp. c-cii, Prel.) (Table 26.—Rep.)	xxxiv
Average Strength of the British Army at Home. (Table 58. page c.—Prel.)	xxxiv
Average Strength and Proportion per cent. of the British Army at Home and Abroad in each of the Years 1861-77. (Table 59. —Prel.)	c

ARMY—continued.

Mortality of the Army at Home. (Table 60.—Prel.)	c
Average Strength of the British Army Abroad in each of the Years 1874-77. (Table 61.—Prel.)	ci
Number of Deaths in the British Army at Home and Abroad, 1874-77. (Table 62.—Prel.)	ci
Annual Rate of Mortality per 1000 amongst Officers and Men in the Army at Home and Abroad, 1858-77. (Table 63.—Prel.)	ci
Strength at Home and Abroad in 1861 and 1871, showing the Numbers and Proportion per cent. born in the different parts of the United Kingdom and elsewhere. (Table 64.—Prel.)	cii
Deaths in Army Abroad of Officers and Men belonging to Great Britain and to England and Wales, 1858-77. (Table 65.—Prel.)	cii
ATMOSPHERIC PRESSURE	xli
AUSTRIA; Fecundity of Marriages in. (Table xxix.—Rep.)	xxxvii
Average Annual Proportion to Population of Persons married, Births, and Deaths, 1853-77. (Table 72.—Prel.)	cix
Estimated Population; Number, and Proportion to Population, of Persons married, Births, and Deaths, in each of the Years 1853-77. (Table 76.—Prel.)	cxi
Violent Deaths, Suicide, Homicide, and Accident; and Proportion of each to a Million Persons living. (Table.)	230
BAVARIA; Violent Deaths, Suicides, Homicides, and Accidents, &c., and Proportion of each to a Million Persons living. (Table.)	230
BELGIUM; Fecundity of Marriages in. (Table xxix.—Rep.)	xxxvii
Average Annual Proportion to Population of Persons Married, Births, and Deaths, 1853-77. (Table 72.—Prel.)	cix
Estimated Population; Number and Proportion to Population, of Persons married, Births, and Deaths, 1853-77. (Table 80. —Prel.)	cxiii
Violent Deaths, Suicides, Homicides, and Accident; and Proportion of each to a Million Persons living. (Table .)	230
BIRTHS	v, xx
Illegitimate; decline in the proportion of	v, xxi
proportional Number of Illegitimate to 100 Births in Counties, 1855-64, 1865-74, and in 1875-77; and Proportion of Spinsters aged 20-40 to every 100 women living at the same age in 1871. (Table 16.—Rep.)	xxii
registered in England, and excess over Deaths, in each Year, 1838-77. (Table 1.—Prel.)	xlvi
Number of Persons living to one Birth. (Table 2.—Prel.)	xlvii
in England 1838-77; and Legitimate and Illegitimate in 1842 and in the Years 1845-77, and Proportion of Males to Females. (Table 13.—Prel.)	lviii
proportion of Illegitimate Children to every 100 Births in the several Counties of England in each of the Years 1867-77. (Table 14.—Prel.)	lix
registered in England in each Quarter of the Years 1838-77. (Table 15.—Prel.)	lx
proportional Number of Births in each Quarter to 1,000 Births in the average Quarter of the Years 1838-77. (Table 16.—Prel.)	lxi
in Counties, in 1877. Numbers, Sex, Legitimate and Illegitimate; Proportions of Male to Female Births, Legitimate and Ille- gitimate. (Table 17.—Prel.)	lxii
proportion of Male and Female Children born in the several Counties of England during each of the Years 1867-77. (Table 18.—Prel.)	lxiii
in Fifty large Town Districts. (Table 39.—Prel.)	lxxxiii

BIRTHS—*continued.*

in Twenty-three large Towns of the United Kingdom. (Table 40.—Prel.)	lxxxiv
in London in the Years 1865-77, distinguishing Males and Females. (Table 42.—Prel.)	lxxxv
excess over Deaths in London in each of the Years 1865-77. (Table 42.—Prel.)	lxxxv
in the United Kingdom. (Table 52.—Prel.)	xcv
in the Islands of the British Seas in the Years 1851-77. (Table 54.—Prel.)	xcvi
of British Subjects at Sea, in the Years 1856-77. (Table 66.—Prel.)	ciii
in European States 1850-77. (Tables 73-84.—Prel.)	cx-cxv
registered in each of the Divisions, Counties, Districts, and Sub-districts, distinguishing Males and Females and the Illegitimate excess over Deaths in each of the Divisions, Counties, Districts, and Sub-districts	30-84
registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters	86-89
of Children out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters	90-93
Illegitimate. (<i>See ILLEGITIMATE BIRTHS.</i>)	
BIRTH-RATE in England in 1877	v, xx
Disparity between, in the different Counties	xx
Illegitimate, per 100 births, in Counties, 1855-64, 1865-74, and in 1875-7; and Proportion of Spinsters aged 20-40, to every 100 women living at the same Age in 1871. (Table 16.—Rep.)	xxii
in England in each of the Years 1838-77. (Table 2.—Prel.)	xlvi
in England in each Quarter of the Years 1838-77. (Table 15.—Prel.)	lx
in Counties in each of the Years 1867-77. (Table 19.—Prel.)	lxiv
in Fifty large Town Districts. (Table 39.—Prel.)	lxxxiii
in Twenty-three large Towns of the United Kingdom in 52 Weeks. (Table 40.—Prel.)	lxxxiv
in London in each of the Years 1865-77. (Table 42.—Prel.)	lxxxv
in the United Kingdom. (Table 53.—Prel.)	xcv
in European States, 1850-77. (Tables 73-84.—Prel.)	cx-cxv
BRAIN DISEASES	226
BURNS AND SCALDS. (<i>See VIOLENT DEATHS.</i>)	
CANCER, increasing fatality of, in quinquenniads, 1850-74, and in 1875-6-7	226
CAUSES of DEATH; of 4181 Seamen in the British Merchant Service. (Table 68.)	cv
of Males and Females in England, classified under 266 heads, at different Periods of Life	146-155
of Males and Females in London at different Periods of Life.	156-161
of Males and Females in England, and in each of the Divisions and Counties	162-185
(from certain zymotic diseases and other Causes) in the Divisions, Counties, and Districts of England	186-197
Accidental, Suicidal and Homicidal	198-221
Dr. Farr's Letter to the Registrar General thereon	225-230
registered in England in each of the Years 1850-77. (Table 1.—App.)	248-253

CAUSES of DEATH—*continued.*

rate of Mortality from, to a Million persons living in each of the Years 1862-77. (Table 2.—App.)	254-256
proportional Numbers dying from each Cause. (Table 3.—App.)	257
rate of Mortality from, during 25 Years, five Quinquenniads, and in 1875, 1876, and 1877. (Table 4.—App.)	258-261
in England, arranged in the order of their fatality.—(Table 5.—App.)	262
of Persons, Males and Females, classified according to the nomenclature recommended by the Committee appointed by the Royal College of Physicians of London. (Table 29.—App.)	278-283
<i>See also VIOLENT DEATHS, SUICIDE, MURDER, and MANSLAUGHTER.</i>	
CENTENARIANS, Deaths of reputed. (Table 33.—Prel.)	lxxviii
CERTIFIED PLACES OF WORSHIP	xix
CHILDBIRTH; Mortality from	227
Deaths at different Ages, of Women after Childbearing, classed under various Diseases, and neither referred to Childbirth nor to Metria in the Abstracts. (Table 12.—App.)	268
Deaths of Women who were returned as pregnant, classed under certain Diseases. (Table 13.—App.)	269
Deaths from Metria and Childbirth in each of the 31 Years, 1847-77, and proportional Deaths of Mothers to Children born alive. (Table 14.—App.)	269
Deaths of Women in, and Mortality per 1,000 Children in Counties. (Table 15.—App.)	270
CHILDREN; Mortality of, in the large Towns and Counties of England. (Tables 19-21.—Rep.)	xxvii-xxx
Mortality of, under one year of age, from certain Causes, in England, Scotland, and in 15 large English Towns. (Table 29.—App.)	278
<i>(See also INFANT MORTALITY.)</i>	
COALS; Average price of, 1861-77, and in each Quarter of 1870-77. (Table 36.—Prel.)	lxxx
CONSOLS; average price of, 1852-77, and in each Quarter of 1868-77. (Table 36.—Prel.)	lxxx
CONSTITUTIONAL DISEASES	226
DEATHS	xxiii
